Local Delegates Chosen for the Pool Meeting

WILL BE HELD IN CALGARY ON NOVEMBER 13—WILL SELECT POOL TRUSTEES FROM EACH DISTRICT TO ACT FOR THE YEAR.

W. C. Smith, M. L. A. for Redcliff and Messrs. P. H. Welderburn, John Fowlie, Social Plains; Carl Axelson, Bingville and S. Boyd, Bruton, have been elected delegates from the vicinity to represent South Calgary district at the provincial convention to be held in Calgary on November 13th.

Present members of the board of trustees of the Alberta Co-Operative Wheat Producers, Limited, will be among the delegates to this meeting, according to the official announcement of the election results made by W. J. Jackman, secretary of the pool, on Saturday. Mr. Jackman headed the poll for the whole province, with H. W. Wood chairman of the pool, a close second.

The elected delegates will all attend the annual meeting immediately following which they will meet according to districts and select their trustee for the year. The trustee they select may not necessarily be one of their number, but he must be a member of the pool resident in the district which he represents. Ten delegates to the annual meeting are elected from each of the seven districts, making a total of 70 in all.

Mr. Jackman said that the poll was a light one, to which he attributed the busy harvest season, members not having time to register their votes.

Successful Concert By the Altar Society

Amuse-U theatre was well filled last Tuesday evening for the concert and lecture given on that occasion under auspices of the Altar society of St. Mary's church. The several musical numbers given by Redcliff and Medicine Hat talent were thoroughly enjoyed. Those from the Hat who took part were Mrs. Bain, Miss O'Flynn and Messrs. Valway and Fitzpatrick. Mrs. G. Hargrave, Mrs. Balmer and D. C. Smith represented the local musical talent and Miss Lillie McPherson in her usual pleasing and efficient manner, gave several dances. She was accompanied by Piper Hosie from Medicine Hat.

Rev. Father Fitzpatrick gave a most interesting as well as an instructive and educative address on "All Trip Across America." In his address he took the audience on an imaginary trip across the continent, laying specific emphasis on the places of interest passed, and making comparisons with the customs and habits of the people encountered. The address was liberally punctuated with illustrative anecdotes, which made it the more interesting and enjoyable.

From every standpoint the entertainment was great success. At the conclusion of the program the members of the Altar Society entertained those who took part, to a social hour in the 'Cliff ha' where refreshments were served. Both here and in the theatre, P. Lavelle, who acted as chairman, tendered to all those who helped make the event such a great success, the hearty thanks of the members of the Altar Society and St. Mary's church.

Urge More Activity In U.F.A. Locals

H. E. H. Schofield, Vice- President of the U. F. A., in the message to the members of the Association calls for a united effort during the present month to bring the membership up to strength and shows the need for a rallying of all forces in order that this may be accomplished. "The U.F.A.," also publishes a letter received from Col. Robinson of the Alberta Co-operative Wheat Producers, suggesting that District Associations throughout the Province, as well as locals everywhere, should make this matter their especial concern. J. C. Buckley, M. L. A., President of the Bow River U. F. A. Federal Constituency Association, has issued in behalf of his association a call for membership drive during the next four weeks. R. O. German, U. F. A. director for Red Deer, in a letter to the Locals in the Red Deer Constituency, declares that now that farmers are realizing some cash from the returns of a bountiful harvest, "the business of collecting membership dues should be the first concern of all our Locals." Mrs. A. L. Warr, U. F. W. A. Director for East Edmonton, suggests a membership by each of the Locals in her district. The writers dwell upon the success of the Association in making the Wheat Pool a reality, but point out that the Association itself is now very seriously handicapped by the lack of funds.

A trade treaty between Canada and South Africa is in the air. At a conference between Premier King and Hon. Geo. P. Graham, representing Canada, and Premier Smuts and Hon. H. Burton, finance minister representing South African Union, improvement in the trade relations between the two countries was discussed.

ROBT. GARDINER, M. P.
Who is holding a series of meetings throughout this constituency this month.

Robt. Gardiner M.P. To Hold Meetings

Robt. Gardiner, M. P. for this constituency, will address meetings as follows next week:

Redcliff, Nov. 14th, 7 p.m.
Long Valley, Nov. 15th, 2 p.m.
Vale, Nov. 15th, 7 p.m.
Schuler, Nov. 16th, 2 p.m.
Hilda, Nov. 16th, 7 p.m.

Will Call Early Session of Legislature

Within four week's time in all probability the Alberta legislature will be convened in regular session to deal with legislation necessary to bring into effect a system of government control and sale of liquor as demanded by the electors of the province in Monday's referendum.

Premier Greenfield in an official statement issued Tuesday afternoon announced that the regular session of the house, which usually convenes in February, will be advanced in order to frame the new liquor laws but he declined to give any indication as to the probable date of the session.

The government statement was made public after it had been decided upon at a conference between Premier Greenfield, Attorney-General J. E. Brownlee and Provincial Treasurer R. G. Reid. Mr. Brownlee gave out a statement on his own account appealing to all citizens to remember that the Prohibition act was still in effect and that it should be observed and respected until new legislation can be brought into force.

Job Printing of the highest class at The Review Office.

Churches

ST. AMBROSE CHURCH
Rev. C. P. Ormea.

24th Sunday after Trinity, Nov. 11. Armistice Day.

8.00 a.m., Holy Communion.
11.00 a.m., Mattins, during which there will be the observance of the two minutes' silence.
12.15 p.m., Sunday school.
7.30 p.m., Evensong.
Wednesday, 2.30 p.m., W. A.
Thursday, 4.15 p.m., J. W. A.
Friday, 7.30 p.m., Evensong followed by Choir practice.

GORDON MEMORIAL PRESBYTERIAN CHURCH
Rev. T. S. Paton, B. A., Minister.

Special Armistice Day and Thanksgiving Services on Sunday, Nov. 11th.

11.00 a.m., the congregation is asked to be in the Church five minutes before 11 o'clock to join in remembering the empire's war dead with two minutes silent prayer.

7.30 p.m., Sunday School.

7.30 p.m., Subject: "Joyful Thanksgiving."

The choir will render special Thanksgiving Anthems both morning and evening.

The church will be decorated for the occasion.

Join us in these thanksgiving services.

CHURCH OF THE BRETHREN.
Sunday School at 10.30 a.m.
Preaching Service at 11.30 a.m.
Preaching Service 7.00 p.m.
David Hollinger.

ST. MARY'S CHURCH
Celebration of Mass 2nd and 4th Sundays of each month at 8.30 a.m., by Rev. Father Fitzpatrick.

SALVATION ARMY
Services will be held regularly each Sunday. Sunday School 3 o'clock. Salvation meeting 7.30. Midweek service every Wednesday at 8 o'clock. All services held in the Howard building. Everybody welcome

The Salvation Army would be very grateful for donations of clothing or anything that could be made use of for relief purposes. Anyone desirous of helping please phone 59 and we will be glad to call. Thank you.

Alberta Gives Big Majority For Govt. Control of Liquor

Estimated that Majority When Returns Completed will be About 30,000--All Cities and Most Towns Give Majorities for Clause "D"--Rural Vote also Swings to Wet Side.

Clause "D," meaning thereby the sale of spirits and wine by government vendor by permit, and the sale of beer to be consumed in licensed places, was carried in the plebiscite last Monday by a majority which may safely be estimated at 30,000 over all of the other alternatives combined. All the cities gave large wet majorities and most of the towns were also placed in that column. In Calgary the vote was almost two to one for "D" in preference to "A."

The vote throughout the province set a record. In the last Dominion general election 162,904 votes were cast in Alberta, but from late vote already accounted for in last Monday's poll there is no doubt that this number will be exceeded by several thousand.

Seven years ago the province gave a dry majority of 20,000 in a total vote of 94,000 on the abolition of the retail sale of liquor.

In 1920 the matter of importation came up and with a total vote of 106,000 there was a majority against importation of 18,596.

Last Monday's vote will go over 165,000 and the wet majority at present is over 25,000 with several places, which are expected to increase this majority, to hear from.

Clause D, apparently has a large clear majority on the first count over the three other propositions and in that event it will be unnecessary to go into the second, third and fourth preferences as expressed in the ballots, later counts be necessary, it is thought that it would be found a large number of first choices cast for B and C would go to D on the second choice.

The swing of the province into the "wet" column was apparent from the earliest returns. The moderation majority appeared with the first polls and despite set backs from occasional areas, largely in the southern parts of the province, it grew steadily into proportions which made the result inevitable. It was notable that the outlying constituencies as a rule gave very substantial "wet" majorities. The result showed that the prohibition forces were not able to rely on the farmers' vote as they did in the past.

Play by Local Talent Here Next Tuesday

The Ladies Aid of Gordon Memorial church will stage a play in the church next Tuesday evening, Nov. 13th. This play is entitled "Aunt Susan's Visit." The title role is that of a quaint old lady of the old school. Aunt Susan is a kind hearted old fashioned and slightly eccentric woman who comes to the city to visit her nephew, whom she has not seen for a number of years. Her oldfashioned ways, ideas and appearance cause must mortification to her nephew's wife, who has high social ambitions, and this, in turn, causes much amusement for the audience. Her nephew's deep regard for his aunt and the fact that he is the only heir, make it necessary for the other members of the family to tolerate her presence until the influence of worldliness and helpfulness is recognized, and results in bringing the whole family to all with whom she comes in contact, to a higher plane of living.

Aunt Susan's utter lack of social manners, her outspoken truthfulness and genuine goodness cause many humorous situation.

Tickets for this entertainment are now on sale. Don't fail to secure one.

Wear a Poppy on Armistice Day Nov. 11

In honor of the men who fought so bravely and in Memory of those who died in battle.

Poppy day has been inaugurated by the G. W. V. A. of Canada as a national Memorial Day and it is their earnest desire that every citizen should wear a poppy on Armistice day in honor of the men who fought and in memory of those that were left "over there."

The poppies are made in Canada by the Veteraft Branch, Dept. of S. C. R. by disabled veterans and their dependents.

Those who wear a poppy on Nov. 11 will be remembering the Dead by helping the living.

Young ladies will be selling the poppies on Saturday. Be sure to get one.

The Canadian National railways turned in a net operating revenue of $5,011,845 in the eight months of the present year ending on August 31 last. During the period of 1922, operations resulted in a net deficit of $1,501,387 on Canadian National lines of the system, but operations on the United States lines showed a surplus of $6,063,232.

Coal Production Climbs

The year 1923 fill see a new record in Alberta coal production. It is expected the total production for the year will reach 7,000,000 tons, in comparison with less than 6,000,000 last year. The production up to November 1, 1,500,000 tons greater than the production of the same period last year. The record production previously was in 1920, when 6,400,000 tons was produced. The payroll this year will, it is expected, be over $18,000,000.

Wants Land for Esthonians

Representing large numbers of people in Esthonia who would find farm homes in western Canada, Sir J. Pika, a native of that country, who was decorated by the ritish government for services during the war, was a visitor to the government buildings the past week. He has been invited by the federal government to make a survey of the west with a view to finding locations for settlers from his native land.

* * *

Survey of Tar Sands

A survey of the tar sand deposits north of Edmonton at McMurray, has just been completed by officials of the federal department of mines.

* * *

Minimum Wage Board Meets

The Alberta minimum wage board is holding sessions in Edmonton the coming week with respect to the regulations outlined by the board recently.

* * *

Immigration Conference

Hon. Geo. Hoadley will represent the Alberta government at a conference on immigration matters to be held at Ottawa during November. Mr. Hoadley will also discuss with those at the conference, the matter of provincial representation at the forthcoming British Empire Exposition in London.

* * *

Director of Technical Education

W. G. Carpenter for some years superintendent of the schools in Edmonton, has been appointed by the provincial government to be director of technical education in the province, and principal of the new technical institute at Calgary.

* * *

Dairy Convention

The annual convention of the Alberta dairymen's association will be held at Edmonton January 23, 24 and 25.

* * *

Stocker and Feeder Show

A stocker and feeder show is being held in Lethbridge during the coming week, along similar lines to that held some time ago in Calgary.

* * *

War on Crows

Plans for a definite campaign to exterminate crows are to be laid before the game associators shortly by Hon. Duncan Marshall, minister of agriculture.

* * *

Fox Farms Growing in Number

There were 24 fox farms in Alberta in 1922, in comparison to only half this number the previous year, according to a report issued by the bureau of statistics at Ottawa.

* * *

Fall Stock Show

The fall stock and show sale under the auspices of the livestock associations and the Alberta department of agriculture, is being held the coming week at the exhibition grounds, Calgary.

Popular Redcliff Girl Married This Morning

A quiet but pretty wedding was solemnized in Gordon Memorial church on Thursday morning, Nov. 8th at 10.30 o'clock when Miss Violet Katherine Gibson, daughter of Mrs. Geo. W. Gibson of Redcliff, became the bride of Mr. Earl Eugene Cooper, of Medicine Hat.

The ceremony was performed by Rev. T. S. Paton in the presence of only the immediate relatives of the family. Mrs. Christie, sister of the groom played the wedding march.

Mr. and Mrs. Cooper have a wide circle of friends both here and in Medicine Hat who all join in wishing them many years of happiness.

Since her marriage Mrs. Cooper was a successful and valuable representative in the interests of Chautauqua work. Mr. Cooper returns at once to resume his studies in Minneapolis and Mrs. Cooper will remain here for a few weeks with her mother Mrs. Gibson.

Woman's Institute Meets November 15

What do you know about meat? Can you tell good meat from poo? Do you know the best method of cooking the cheap cuts, or do you just trust to luck that it would be fit to eat? How many different cuts of beef do you know?

Come to the metting of the Woman's Institute next Thursday, Nov. 15, at 3.45 p.m. at the Presbyterian church and hear all about meat. 10c collection. Everybody welcome.

Provincial Portfolios Are Rearranged

The following changes in portfolios of ministers in the Alberta government became effective at one o'clock Saturday, November 3, at which hour the respective ministers took oath of office before His Honor Lieutenant-Governor Brett.

Hon. R. Greenfield, formerly provincial treasurer and secretary, becomes minister of municipal affairs.

Hon. J. E. Brownlee adds the duties of provincial secretary to those of attorney-general.

Hon. George Hoadley becomes minister of public health, in addition to his present portfolio of agriculture.

Hon. R. G. Reid, formerly minister of municipal affairs, becomes provincial treasurer.

This rearrangement of portfolios was decided upon in order to relieve the pressure of work upon the premier who in addition to the premiership has been carrying the portfolios of treasury and secretary, while this arrangement will permit whole attention to the treasury, and to a close study of the questions relating thereto.

The premier's past experience in municipal work will be of great assistance to him in the administration of the department of municipal affairs. In the work of the development of coal markets the premier will co-operate with the Hon. J. E. Brownlee, the new provincial secretary.

For some time the Hon. G. R. Reid has been taking up the study of taxation and finance with a view to this change which has now come about.

New Record Made For Loading Wheat

A record that stood for 10 years toppled Saturday, when the western terminal elevator at Fort William loaded 1,145,000 bushels of wheat, as much as 43 average farmers raise in a year, into the hold of the steamer Brown in one minute. It is a high mark for this port and probably for the world.

The one hour wheat poured from the seven spouts until the 3,900 tons were aboard, while seven samplers of the grain inspection department tested the running stream. The previous record was established in 1913 by an elevator which placed 1,045,000 bushels on the Steamer Matheson in one hour. The full cargo of the Brown was 360,000 bushels.

U. S. Wheat Growers Want State Pool

Separate state units pooling of wheat by counties on the basis of grades, are the principal features of a five-year contract for co-operative handling of wheat submitted to be drawn up at a meeting Monday of the executive committee of the national wheat growers' advisory committee, headed by Frank O. Lowden, former governor of Illinois, it was announced yesterday.

Herman Steen, executive secretary, said reports that the national committee proposed to absorb the American Wheat Growers Association were without foundation. It was made plain that the national committee wants separate state organizations and decided there be no paid solicitors for membership.

An ad. in the Review will reach the people you want to get in touch with.

Redcliff Gives Good Majority For Clause "D"

BIGGEST VOTE POLLED IN HISTORY OF TOWN—OFFICERS KEPT BUSY AT POLLING BOOTH —CONSTITUENCY ALSO GOES FOR CLAUSE "D."

One of the largest votes ever cast in Redcliff was polled last Monday in the liquor referendum taken on that occasion. In all 333 votes were polled. These were accounted for as follows:

For Clause "A"	117
For Clause "B"	19
For Clause "C"	7
For Clause "D"	158
Rejected Ballots	32
Total	333

It will be seen by these figures that Clause "D" had a majority of 41 over Clause "A" and a majority of 15 over all the clauses combined.

To handle this vote the Deptuy returning officers were kept busy all day. From the opening till the closing of the poll there was an almost endless procession of voters as both sides worked hard to get the vote out. Beyond the rush the day passed off very quietly as the rivalry between the leaders of the contending parties was of a friendly and jovial nature.

Both sides were pleased with the results locally. Those supporting clause "D" declared they secured the majority and those supporting clause "A" because they greatly reduced the wet majority secured on the last vote on this question. On the last vote the standing was 150 wet and 44 dry with slightly over half the polls heard from in Redcliff constituency, clause "D" is leading by about 300 majority. In 1915 this constituency gave a wet majority of 600. In 1920 it gave a dry majority of 169. This year it is estimated that the wet majority will be in the neighborhood of 600 when all the polls are heard from.

Bowell gave majority of 25 for Clause "A" and Box Springs a majority of 29 for Clause D" "

Best of Comedies At Hat Saturday

One of the most interesting and original comedies which has been staged in Medicine Hat for a long time will be presented by Margaret Marriott and the Grand Players at the Empress theatre for one day, in that city, Saturday, Nov. 10, matinee and evening. The recent visit of this company, who have just closed a whole season's consecutive engagement at Calgary has whetted the appetite of theatre lovers for their next appearance.

Seats may now be booked for all performances of this engagement and it is advisable that reservation be made early.

Nine Banks Behind The Wheat Pool

Hon. J. E. Brownlee stated that the last step of importance to the pool has been finally completed with the execution last week of the Bankers' Asso. of the line of credit to their association who wish to participate. The following banks have, in varying amounts, undertaken to furnish the complete of credit required by the pool:

Bank of Montreal, Bank of Nova Scotia, alink of Toronto, Union Bank, Canadian Bank of Commerce, Royal Bank of Canada, the Dominion Bank Bank D'Hochelaga and Imperial Bank of Canada.

"The negotiations with the Bankers' Association," said Mr. Brownlee, "were conducted throughout without reference to government guarantee. Had the government bought it privately and the government been willing to give a straight guarantee covering the borrowings of the pool there was no difficulty in the financial negotiations and the amount of the initial pay-

Interesting Remarks On Result of Vote

In discusing the result of the vote on the liquor question the Calgary Herald reported the following in one of the committee rooms:

"Well now," said one lady at the prohibition rooms when the majority had piled so high that there was doubt of the result, "the province will have a chance to drag itself out of debt."

"Yes," replied another, "at the next meeting of the ladies' aid I am going to suggest that we set up a bar in the back room and clear off the debt of the church."

TWO MORE ELEVATORS COMPANIES JOIN POOL

Two more elevator companies, Western Canada Flour Mills Ltd., with quite a number of elevators in the province and the C. E. Phillips Company have signed the agreement to handle pool wheat, Mr. Jackman said. his brings the total number of companies handling pool wheat to 22. Several Winnipeg companies with lines in this province have not yet signed the agreement but negotiations are still being carried on with these concerns.

RED ROSE TEA "is good tea"

The sealed package keeps it good

Gives you lasting uplift—Bovril

Canada Before The World

That publicity pays if it is of the right kind has been so thoroughly demonstrated that nobody now questions it. Canada should, therefore, in 1924 reap some very great benefits from the high character of the advertising it has received throughout the world this year, and advertising the value of which was all the greater because it has been largely of the unsolicited rather than of the paid variety.

While memory fails to recall all the events of the present year which have served to keep Canada in the world's limelight, a few incidents may be mentioned. The unofficial holiday visit of the Prince of Wales to his ranch in Alberta has resulted in the publication of thousands of articles, many of them profusely illustrated, in the newspapers and magazines of Great Britain, United States and Canada, while for weeks telegraphic and cable despatches of his visit have been a portion of the daily newspaper readers bill of fare.

Now we have David Lloyd George, still the outstanding figure in the public life of the Empire, and who has been described as the greatest publicist of them all, as our guest. Other distinguished British visitors included Lord Birkenhead, Lord Lovat and the Empire Forestry Commission.

For the second time in the history of the United States the President of the republic stepped on foreign soil when the late Mr. Harding paid his memorable visit to British Columbia.

A group of editors of prominent Swiss newspapers have toured the Dominion making a close study of conditions here with the object of ascertaining whether the Dominion offers a suitable field for Swiss immigrants.

And Canadians abroad have largely aided in the good work. President Beatty, of the C.P.R., made an extensive tour of a number of European countries, meeting many prominent people and effecting business arrangements for a larger influx of immigrants of the right type than has been the case since the war put a stop to all immigration. Canada's delegates to the Assembly of the League of Nations at Geneva brought this country very much to the fore through their continued advocacy of an amendment to the famous Article 10 of the covenant, and obtained the support of every country except Persia. The press of the entire world followed Canada's action with the keenest interest. And at the present time Premier King and his colleagues are in London attending the Imperial Conference and the Empire Economic Conference, with resultant widespread publicity to their actions and speeches.

Even the terrible Japanese disaster served to give publicity of a very fine kind to Canada through the splendid action of the officers and men of the "Empress of Australia," the story of whose heroism and devotion to duty in the face of grave danger and unprecedented difficulty has gone around the world, revealing that the great traditions of the British merchant marine are fully upheld and maintained by those who man Canada's ships.

Lastly, every Canadian farmer has done his part in bringing the Dominion very much to the forefront this year. Canada's wheat crop is this year possibly the greatest factor influencing the export markets of the world. Day by day prices on the Chicago and Liverpool markets have gone up and down like a jack on a string as estimates of the Canadian wheat crop have increased or decreased. The size of the crop, necessitating the bringing in some thousands of men from Great Britain to assist in the harvest, has focused world attention on Canada anew as not only the bread basket of the Empire but the coming great food supply of the world, and millions of thousands of head of cattle to the British markets is having the same effect.

Canada's export trade with the world is steadily growing. It is expanding in the Orient as well as in the Occident, and where Canadian natural products and "Made in Canada" goods are shipped, there the Dominion is advertised as a coming country. A notable visitor to this country was the Rt. Hon. S. V. Srinavasa Sastri, who recently returned to India after visiting the various Dominions in connection with the question of Indian immigration. He pays a remarkable tribute to Canada, which may well be quoted in concluding this article. He says:

"Canada is a beautiful country—a Paradise. I travelled through it, and everywhere I went I was delighted with what I saw. Moreover, I was surprised at the high rate of wages paid, even for unskilled labor, and I am indeed astonished that the people of Britain do not go there in far larger numbers, instead of remaining in their own country, where life is so great a struggle for many of them. It seems to me that there is no comparison between living in England and in that Paradise, where there is also so much more work to be done than in the Old Country. The climate, the goodness of the food, the clearness and bracing qualities of the air, and the absence of overcrowding, all suggest that Canada will build up magnificent citizens."

Much Radium Destroyed

Up to the time of M. and Mme. Curie's discovery, pitch-blende, the jet black mineral in which radium is found, was regarded as being almost valueless. Mining companies actually paid large sums to have the residue of its pitch-blende supplies, from which other minerals had been extracted, carted away to the destructor. In this manner many millions of dollars in radium was lost forever.

Damaged, But Reparable

Joe Hass tells about a tin roof of a Kansas store that was torn off and rolled into a compact bundle by a cyclone. Having a sense of humor, the owner wrapt a few strands of baling wire around the ruin and shipped it to Henry Ford. In due time came a communication saying:

"It will cost you $48.50 to have your car repaired. For heaven's sake tell us what hit you!"

Used After Shaving Keeps Skin Soft and Smooth

Many men suffer from irritation of the skin as a result of shaving. With some it assumes a form of eczema and becomes most annoying and unsightly. By applying a little of Dr. Chase's Ointment after shaving the irritation is overcome and Barber's Itch and Eczema are prevented or relieved.

DR. CHASE'S OINTMENT

60 Cents a box, all dealers, or Edmanson, Bates & Co., Ltd., Toronto

Interest Taken In Health Work

Says Health Reports Show Progress In Canadian West

Mrs. V. S. MacLachlan, convener of the standing committee on Public Health of the Federated Women's Institutes of Canada, considers that the most thrilling literature we have today are the health reports. They ought to head the list of best sellers, she thinks.

"In British Columbia we have one whole programme devoted to health reports and discussion on them. Definite facts in regard to local schools never fail to arouse interest," she said.

Alberta she praised for its maternity nurses, and Manitoba, she declared to be "strong on tonsils." Nova Scotia's child welfare activities, its teaching on the food value of milk, and its work in the matter of school lunches were all favorably reviewed. Ontario was also commended for its child and motherhood work, and P.E.I. County Institutes in particular in regard to health work.

Mothers' Best Friend In Rearing Children

Pain and sudden sickness are apt to come upon us at any time and safety lies in having always handy on the shelf a reliable pain relief like good old "Nerviline." For nearly half a century Nerviline has been a family standby, and most mothers know its value. In cases of cold, sore throat, tight chest, colic, cramps, nausea, and sudden attacks of sickness at the stomach. For internal or external use, Nerviline is worth its weight in gold in every home, and costs but 35 cents at any dealers.

Western Grain Route

"In the western grain route I believe we possess the best regulator of eastern grain rates than can be supplied," declared Dr. Robert Magill, Secretary of the Winnipeg Grain Exchange, in discussing the activity of British Columbia and Alberta in that direction.

SYMPTOMS OF ANAEMIA

An Inherited Tendency to Anaemia May be Overcome

Some people have a tendency to become thin-blooded just as others have an inherited tendency to rheumatism, to nervous disorders. The condition in which the blood becomes so thin that the whole body suffers comes on gradually and stealthily that anyone with a natural disposition in that direction should watch for symptoms carefully. Bloodlessness, or anaemia, as the medical term is, can be corrected much more easily in the earlier stages than later. It begins with a tired feeling that rest does not overcome, the complexion becomes pale, and breathlessness on slight exertion, such as going upstairs, is noticed.

Dr. Williams' Pink Pills are a home remedy that has been most successful in the treatment of diseases caused by thin blood. With pure air and wholesome food these blood-making pills afford the correct treatment when the symptoms described are noticed.

You can get these pills through any dealers in medicine or by mail, postpaid, at 50c a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Under-Estimated Difficulties

Thought that Allan Crawford Lost His Life Through Inexperience and Lack of Equipment

In an interview in Toronto, Harold Nolce, the leader of the Stefansson relief expedition to Wrangel Island, expresses the view that Allan Crawford, the University of Toronto student, was took possession of Wrangel Island about two years ago in the name of the King and who along with his companion is believed to have perished early this year, had under-estimated the difficulties and dangers of the task and lost his life through inexperience and lack of equipment. Mr. Nolce paid a tribute to Crawford's scientific work.

"He apparently made that a point of first consideration," said Mr. Nolce. "He made trips to the interior. He explored the mountains. He collected meteorological data. He made a chart of the coast line and took ocean soundings.

"Except letters to his father and to Stefansson he himself, left no documents behind. He took with him all that was of value and his records perished with him."

A letter which Crawford had left on Wrangel Island for his parents, Professor J. T. Crawford, of the University of Toronto, and Mrs. Crawford, in the event of his being lost, was given to Mr. and Mrs. Crawford. The contents of the letter are much too intimate, Professor Crawford said, for publication.

Animals In Heaven

According to the Mohammedan belief there are ten animals in heaven. These form the following strange menagerie: The calf offered by Abraham, the ox of Moses, the whale of Jonah, the ass of Balaam, the ram of Ishmael, the ant of Solomon, the camel of the prophet Saleeh, the cuckoo of Balkis, the dog of the Seven Sleepers, and al borak, the animal which carried Mohammed to heaven.

Bad Footwear Is Menace to Health

Cause of Large Percentage of Illness Say Authorities

Bad footwear is declared by some prominent English medical authorities to constitute a grave menace to the health of the nation. The secretary of the Boot Trades Association, representing 10,000 dealers, recently sent a questionaire to medical and school attendants authorities asking how much sickness was caused by shoddy footwear. One health officer reported 30 per cent. of the illness among children and 50 per cent. among adults can be traced to this cause. A Plymouth authority estimated that 50 per cent. of the general illness is due to faulty boots and shoes.

Recently cheap paper shoes have been coming into England from Germany. But there is also much criticism for those manufactured at home because of their unscientific design and questionable material.

To have the children sound and healthy is the first care of a mother. They cannot be healthy if troubled with worms. Use Mother Graves' Worm Exterminator.

New British Invention

Miners' Safety Lamp Is Also Fire-Damp Protector

Fire-damp is probably more dreaded by miners than any other menace of their calling. Its presence leads to explosions, breathing it is dangerous and its approach is so insidious that the damage may be done before it is discovered. Safety lamps have been in common use for many years to prevent fire damp explosions, the famous Davies lamp being the one best known. Now comes an improvement on the Davies lamp and also the invention of a Briton. This new lamp not only is a safety lamp from the explosive side of mining and a real illuminating lamp, but it is also a fire-damp protector. Its peculiar frame assembles a bunch of tuning forks and they are made so sensitive that the presence of even so small an amount of fire-damp in the air as two per cent. will cause the lamp to sing, or vibrate a musical note. As the fire-damp increases in the air, the lamp sings more shrilly, affording ample warning to the underground worker of the deadly menace.

Change of Water Change of Diet Change of Climate Cause DIARRHOEA

Mr. Fred Palmer, 217 Dalhousie St., Brantford, Ont., writes:—"When I first went out to the North-West the water played havoc with my bowels, and being in a remote spot I could not get anything to give me relief for any length of time.

I wrote and told my wife about the time I was having and she sent me a bottle of Dr. Fowler's Extract of Wild Strawberry, and I cannot speak too highly of it for what it did for me.

Whenever the children have any bowel trouble from eating fruit or drinking strange water, which they have done for the past five years, living in the country, the only remedy we use is Dr. Fowler's, and nobody should be without it as it cannot be beat for instant relief."

Dr. Fowler's Extract of Wild Strawberry has been on the market for the past 78 years, you don't experiment with new and untried remedies when you buy it, but be sure and get "Dr. Fowler's" when you ask for it as substitute may be dangerous to your health.

Price 50c a bottle; put up only by The T. Milburn Co., Limited, Toronto, Ont.

Speeder Summoned From Air

While Dominic Rifiore was speeding near San Jose, Cal., a summons fell from the air on the road in front of his auto, charging him with violating the traffic laws. Rifiore got out and picking up the paper leaflet that Robert Byers, traffic officer, had swooped down and arrested him from the air.

To Aid Immigration

Would Have Britain Build Branch Lines in Western Canada

As an aid to Canada's immigration the British Government should build and pay for branch lines from the outlying districts in the west to the main lines of the Canadian railways, suggested A. A. Somerville, member of the British House of Commons, who was in Ottawa recently to discuss with government officials the British colonization scheme. As soon as the various districts had been settled the branch lines could be sold to the Canadian Government Railways, he added. Another suggestion was that the Federal and Provincial Governments lease several hundreds of thousands of acres of land to the Old Country Government which could take it over and develop it. Mr. Somerville would like to see the British Government spend the money now used for unemployment doles to settle British emigrants in this country.

Killed By Blood Poison

Used an old razor for paring his corns. Foolish, because 25c buys a bottle of Putnam's Painless Corn Extractor which for fifty years has been removing corns and warts without pain. No failure if you use "Putnam's." Refuse a substitute, 25c everywhere.

Loyal French-Canadians

Exception Is Taken to Statements Made That French-Canadians Are Against Imperialism

A Canadian writing to the London Observer, takes strong exception to allegations made in recent articles in the Observer by a special correspondent of that paper to the effect that nearly all French-Canadians other than British stock, are wedded to the creed of the Nationalist Association, as against imperialism. The letter recalls a prophecy that the last gun in defence of the British Crown in Canada would be fired by a French-Canadian, and concludes with long extracts from recent speeches made by Premier Mackenzie King, explanatory of Canada's attitude with regard to the British commonwealth.

Do not allow worms to sap the vitality of your children. If not attended to, worms may work irreparable harm to the constitution of the infant. The little sufferers cannot voice their ailment, but there are many signs by which motherhood can be made aware that a dose of Miller's Worm Powders is required. They are pleasant to the taste, quickly and will expel worms from the system without any inconvenience to the child.

Making Air Travel Safe

Airplane Service Is Being Gradually Perfected and May Soon be Popular Method of Transportation

We have learned that it is safer today to travel by rail than it is to risk our lives on crowded city streets where accidents are frequent. But in the early days of railroad development there was a frightful toll of human life. The tracks would break; rails would spread; broken wheels and axles were common, and bridges collapsed. And that was not many years ago.

Already the latest mode of travel, airplane service, which seemed so hazardous, is being perfected so that people begin to see it, a few years hence, as a safe way of transportation.

The problem before the builder of airplanes is greater than was faced by those who fostered steamship and railway inventions, but last year one American aerial company reports that it made over 2,000 flights and carried over 9,000 passengers without one accident. In the British service, in 1923, 620,000 miles were flown without a fatal accident.

All-metal construction will prove an aid in perfecting and making safe the new art of flying. One terrible danger is that of fire from the engine reaching the gas tank. A mounted tank which can be dropped clear of the machine by the pull of a lever, as an airman drops a bomb, is something which must be worked upon as an assurance against explosion.

More Than a Village

Business Section of Yonkers As Lively As Broadway

It is unusual to see how big cities are dwarfed by their proximity to New York. There, for instance, is Yonkers, which boasts a population of 100,000. Getty's Square, the busiest section and focal point of traffic, is as lively almost as Broadway and 42nd Street. But, because Yonkers is on the upper fringe of Manhattan, people think of it as a suburban village. It is the New York habit to gaze through the wrong end of the telescope in viewing its neighboring cities.—New York Correspondent.

Mustard gas is being used in Texas to clear out rattlesnakes' nests.

TOO MANY GIRLS—

dread winterly weather for the torture it brings from sore faces, chapped hands, frostbite and cold-sores.

With the face, hands and arms pecked by Zam-Buk, frost and cold winds simply cannot redden, roughen and chafe your skin. Wash with Zam-Buk Medicinal Soap and apply the Zam-Buk balm after drying.

There is nothing like this Zam-Buk treatment for keeping the skin smooth, strong and flexible. Composed exclusively of rich herbal essences, Zam-Buk soothes and purifies the tissues and prevents all roughness and soreness.

Where the skin has already become chapped, blistered and sore, Zam-Buk, because of its great antiseptic and healing power is doubly valuable. It takes away the smarting irritation almost immediately, kills dangerous disease germs and quickly heals with new healthy skin.

Zam-Buk is the best remedy obtainable for chapped, cracked hands, cold-sores, frostbite, chilblains, winter eczema, burns, scalds, and all wounds and injuries. 50c. box, all chemists.

Japan Refused Russian Relief

Soviet Sent Shipload of Food For "Laborers Only"

The Soviet Government at Moscow cannot even offer relief decently. It sent a shipload of food to Japan, explaining that it was for the relief of "laborers only," and declaring that the Russian Government regarded the earthquake as "an opportunity for furthering the revolutionary movement." The Japanese Government would not accept relief on those terms, and refused to allow the ship to discharge her cargo. It should not take long to decide which of the two governments is the more civilized.—Hamilton Herald.

A Household Medicine.—They that are acquainted with the sterling properties of Dr. Thomas' Eclectric Oil in the treatment of many ailments would not be without it in the house. It is truly a household medicine and as it is effective in dealing with many ordinary complaints it is an inexpensive medicine, keep it at hand, as the call for it may come most unexpectedly.

Y.M.C.A. In Palestine

A seven-acre site has just been bought in the Nikeforeish district, Palestine, as a gift to the Young Men's Christian Association. The sum of £100,000 will be spent in erecting a Y.M.C.A. building on the new estate.

The governor of Valencia has been dismissed by the Spanish Government from his post for having played the role of forador at a recent bull-fight under an assumed name.

Canada's Last And Best Fur Reserve In Arctic Being Depleted By American Whalers

This year, a 900-ton whaler from San Francisco, with auxiliary engines in addition to her sails, is being built and fitted out specially for trade with the Eskimos of the Canadian Arctic, writes the Edmonton correspondent of the London Times. In addition to this boat three other American schooners will operate in the Arctic Ocean, trading all the way from Herschel Island, at the mouth of the Mackenzie River, via Banks Land and Victoria Land, to Coronation Gulf, in the east.

To herald their advance the enterprising American trades send letters to the Eskimo, with picture postcards of their ships and an announcement that they will sell the latest in trade goods at rates much below those of the Canadian traders, who must come in by the overland route. These letters and picture are sent direct by dog team across Alaska and the Yukon.

The Eskimo, who lives the life of a close community in his small villages, each of which is practically a tribe in itself, trades, as he lives, on the community plan. When the alluring pictures arrive a conference of headmen is held and the result usually is that the whole settlement waits for the American trader, ignoring all offers from the Canadian trader, who has meanwhile reached them by the overland route.

Canada's last and best fur reserve is being depleted by American whalers, which every year take out raw furs worth thousands of pounds free of duty.

The raw fur trade of the world centres in two or three places, and of these the Canadian Arctic today heads the list. Furs worth many thousands of pounds are trapped annually by the Eskimos, red or white trapper of the North West Territories, and eventually find their way to the fashion centres of the world.

The annual value of all this trade to Canada and the Empire in general is greatly reduced as the result of American enterprise. It must be remembered that every season shiploads of fine furs leave Canadian territory for the United States, via Behring Strait and the coast of Alaska, to San Francisco, Seattle and other American coast cities.

And not only is the American trader and trapper able to take Canadian raw furs out of the Arctic free of duty, but owing to the lower cost of water carriage on trade goods through Behring Strait, as compared with the mail and river route for Canadian trade goods via Edmonton and the inland waters of the Mackenzie River, the American whaler can sell goods to the Arctic Eskimo much cheaper than can his Canadian competitor, despite the customs duty imposed by the Canadian Government on trade goods brought in from American ports.

The hospitality of the Canadian Government begins at Herschel Island, the Royal Canadian Mounted Police post in the Arctic Ocean, and the first port to call after the American whalers pass through Behring Strait on their trading trip. Here the kindly Government placed a police constable aboard each ship to act as customs officer and to check all sales made to the Eskimo.

The whole summer the American whale sails the Arctic, calling at the various Eskimo settlements which are then on the coast on the lookout for the trading vessels. White fox skins, the minted gold of Arctic trade, load his vessel's holds to capacity. American-made goods adorn the igloo of the Eskimo, obtained at prices which stagger the imagination.

As to trading prices, a white fox fur is frequently demanded in return for a plated safety razor or a tin mouth organ worth half a crown. A rifle worth about £7 is handed over to the Eskimo in return for white fox or other furs worth ten times as much.

Often an astute trader will set aside the forward end of his decks to accommodate a whole village of Eskimo families, whom he will keep throughout the season long in the unaccustomed luxury of plum and apple jam, sweet biscuits, and cheap cigars, in return for all the furs which the village may trap, and for all the seals or polar bears which they may take. The trade, at the end of the season, loads the Eskimo families down with a lot of cheap rubbish and everybody is satisfied.

In a vain struggle to compete with the American trader, the Canadian fur companies and trading houses maintain expensive chain of posts and traders throughout the Arctic. To them must go the credit for developing the country, paying for its upkeep, for its policing, and for their endeavor to sell Canadian and British goods in the Eskimo.

But when the Canadian Government places a stiff export duty on raw furs to American, the Canadian trader must fight an uphill battle against odds.

Standardized Mill Screenings As a Feed

Amended Feed Stuffs Act Is Now In Force

Amongst the feeding stuffs available at the mills and feed stores in Canada, the product known as mill screenings will become more plentiful after the beginning of October of this year. With that date the amended Feeding Stuffs Act comes into force requiring millers to discontinue the practice of adding ground screenings to shorts and other mill offal, and to sell them as a separate, standardized product. Hitherto screenings have been very variable in composition and quality, but standardization will give the purchaser the same assurance of value as with shorts or other mill feeds. The act is administered by the Seed Commissioner of the Dominion Department of Agriculture at Ottawa.

Although a useful feed for several kinds of stock, mill screenings have been found by Experimental farm tests to be specially valuable for hogs. At the Central Farm at Ottawa, they were found to be equal to standard meal mixtures for this purpose, and at several of the branch farms and stations the material has come to be regarded as a standard feed in maintenance and to a lesser extent in fattening mixtures.

Screenings have also proved particularly valuable in feeding beef cattle. As feed for sheep they are better on ground because sheep dislike a fine, dusty or floury feed.

Mill screenings combine well with all grain mixtures for all classes of farm stock. In hog feeding they are useful for all classes over three months of age. Equal parts bran and screenings make a good ration for cows, while for milking cows, the ration is improved by the addition of shorts. For fattening, they may be fed with milk or in mixture consisting of screenings two parts, corn or barley, one part, and shorts one part. For milch cows they may form up to one-third of the regular meal ration.

For calves of over five months, a good maintenance mixture is: two parts, bran one part, screenings one part, oil cake one-half part. For heifers the screenings may be considerably increased. For fattening cattle, combined with corn, barley, or oil cake, they may replace from one-third to one-half of the regular meal mixture. Two parts each of oats, bran and screenings makes a good combination. The addition of one-half part of oil meal is advisable, but the screenings themselves frequently contain a considerable percentage of flax seed.

The Good Old Days

In Some Ways They Might Be Preferable to Present

Grandfather came west in a covered wagon, drawn by a team of oxen.

I came out in an upper berth on which the railroad had the colossal nerve to charge $3.40 surtax.

Grandfather worked two years clearing a patch of ground and building a home.

I will work fifteen years, making payments on fifty feet front, with five rooms and a bath.

Grandfather drove to town—twenty-three miles—twice a year for provisions, consisting mainly of flour, sugar, bacon and coffee.

The delivery boy made a mistake in our order today and we had to dress and go out for dinner, and the salad was abominable.

No wonder grandfather calls them "the good old days!"—Life.

Predicts Trouble for World

Professor McMillan, of Chicago, announced that the sun would meet another star at a distance equal to the distance between the earth and the sun once in every million, billion years, a mere instant for astronomers. When ever this occurs something is likely to happen to the earth in its orbit.

A silkworm in its brief lifetime spins about 4,000 yards of thread.

Smart men can learn many things from fools.

Canada Going Ahead

Is Land of Opportunity Says British Motor Magnate

One of the most interesting speeches made by visitors from abroad to the Canadian National Exhibition was that of the famous British motor magnate, Sir William Lotts. Sir William first began to visit Canada 20 years ago and has watched her steady rise. One of the important stories he told in illustration of what Canada means to the Motherland, for those who understand, was of a London boy, sprung from the mean streets of direst poverty; who had been sent to Canada almost a waif, and was now head of an important corporation. Sir William, of course, did not give the name of this man, who is still young, but he said that the lad's career was sufficient proof to him that Canada was the land of opportunity.

Sir William also brought reassuring news from the other side; when he utterly scouted the idea of another European war on a serious scale. It amazed him when he reached New York to find that people on this continent took such an idea seriously. Moreover, he was able to say that the condition of the staple industries of Great Britain was improving month by month, despite the fact that business men would like to see them better. Above all he brought his own visual evidence of the fact that Canadian export trade was growing. The familiar motto "Made in Canada" was, he said, becoming familiar not only in Great Britain but in the ports of Europe. When he compared Canada with the European countries he had seen within the past year, the suggestion that we have anything to be dismayed about struck him as ridiculous. We fancy that it would strike many other visitors in a similar light.—Toronto Saturday Night.

Growing Good Oats

Prince of Wales is Cultivating the Profitable Variety

The story is told of a city youth who hired out as a farm laborer. The first morning on the farm he was awakened before daylight from his sleep by the farmer with instructions to "Hurry up, we're going to harvest oats today." "What's the idea?" asked the sleepy hired man. "Are the oats wild ones that we have to crawl up on them in the dark?"

The news item concerning the crop on the Prince of Wales' "E. P." ranch in Alberta recalls the story, for the reason that it reminds us there are two varieties of oats—wild and tame. History is full of stories of men, including princes and others of royal or noble birth, who spent the days of their youth in cultivating the former unprofitable kind, much to their discredit. Today we learn through the news columns that the heir-apparent to the throne—he has a record crop of oats, grown for the purpose of feeding stock on his western ranch.

Just another reason why the Prince of Wales is popular, and why the British monarchy is the most stable in the world.—St. Thomas Times-Journal.

Manitoba Opportunities

Recent Publication Deals With Resources of Manitoba

A recent addition to the publications issued by the Natural Resources Intelligence Service of the Department of the Interior is a report, entitled "Manitoba—Its Development and Opportunities," the data for which was obtained from various federal and provincial departments. The leading natural resources of the province are discussed and synopsis of the various regulations in connection with their development are also given.

Valuable statistical information is included, illustrations depict the early days of Manitoba, recent mining developments in the northern part of the province and representative agricultural scenes.

Praises Canadians

In the course of his speech at the final session of the League of Nations assembly, President Torrente, referring to the question of Article 16 of the League covenant, paid warm tribute to the spirit of conciliation shown by the Canadian delegation throughout the discussion of the Canadian motion to render more definite the question of the obligations of members to preserve the territorial integrity of other members.

Magna Charta As a Shrine

Last year 14,000 persons inspected the Magna Charta, the famous charter of British rights in the British Museum. Heavy green blinds are kept over the precious parchment to exclude the full light rays, and four prevent deterioration, but are lifted to show the charter to admiring pilgrims.

Trophies For Winter Fairs

Silver Cups Donated For Competition At Regina and Saskatoon

Two silver cups to be known as the Hon. A. P. McNab challenge trophies, have been donated by the Institutional farms branch, Saskatchewan Department of Public Works, for competition at the Regina and Saskatoon winter fairs, it was announced by T. D. Elderkin, Manager of the Winter Fair Board, Regina.

The cups will be offered for competition at the two cities on alternate years and must be won three times, not necessarily in succession, before becoming the property of any exhibitor.

This year, one cup will be offered at the Regina Winter Fair, as the premier award to the exhibitor of the champion standard bred barrow or select bacon. The other cup will be awarded at Saskatoon for the best pen of three finished bacon barrows exhibited.

Competition in the classes for these cups will be open to animals from farms under the direction of the provincial superintendent of institutional farms.

Substitute For Flax

Flax Lily Grows Abundantly and is Easier to Cultivate

Linen, heretofore made exclusively from flax, has been growing dearer and dearer in proportion as the flax plant has become rarer and more difficult to cultivate. Now, it is said, a satisfactory substitute has been found in the flax lily, which grows in abundance in New Zealand. The plant will grow admirably in many parts of Europe and America. It is far easier to cultivate than flax itself, and it has a yield of 2,240 pounds to the acre.

No Banks In New Hebrides

Though export trade valued at £187,000 was done last year by the New Hebrides, there are no banks in these Anglo French administered islands in the Pacific, states the British resident commissioner in his annual report.

"Hello, Smith; suppose a man marries his first wife's step-sister's aunt, what relation is he to her?"

"First—wife—ump—step - aunt—er—let me see; I don't know."

"He's her husband."—New York Herald.

Predicted That Aviation Will Soon Revolutionize Social Life In General

Value of Cow Testing

Only Sure Way of Increasing Dairy Herd Production

The Dominion Dairy News Letter of September 10 in its cow testing notes gives two instances of remarkable production increase by cows under the cow testing system. One is at the Agricultural School at Oka, Que. Here in 1926, 44 cows averaged 6,733 lbs. milk and 257.7 butter fat. In 1922, 46 cows averaged 8,901 lbs. milk and 346 lbs. butter fat. In 1926 eleven cows produced 300 lbs. fat; in 1922, thirty cows produced over 300 lbs. In 1922 the average for the ten best cows was 10,811 lbs. milk and 405 lbs. fat. The herd consists of Ayrshires and French-Canadian cattle. A second instance reported at Blenheim in Kent county, Ontario, where in 1926, ten of C. E. Rowe's cows produced 7,468 lbs. milk and 246.5 lbs. fat; in 1922, eleven cows produced 10,235 lbs. milk and 346.4 lbs. fat. In the case of Mr. Rowe's herd the increase in production amounted to nearly 1,100 lbs. butter fat for the year, which at 25c per pound would amount to $385. As the News Letter says "Increased production per cow is a possibility in every herd if the owner will take stock of each individual cow's production and then eliminate the poor producers."

Immigrants For Canada

British Journal Speaks of Opportunities For Man Who is Willing to Work

At present Canada exports from twenty-five to thirty million bushels annually. That estimate does not include the opportunities for mixed farming for the home market in the irrigated districts of the prairie; which provides a good living for the man who is prepared to work hard and continuously. It is probable that the difficulty of settling the corn-lands largely consists in the lack of communications, which again prevents the establishment of townships. At the present time, Canada possesses the finest railway system of any Dominion; and it would seem that what is required is a systematic scheme of extension and colonization throughout the region to the east of the Rocky Mountains.—London Morning Post.

Blue-Eyed Men Best Shots

Blue-eyed men make the best shots, according to United States Army statistics. Of 1,000 persons qualifying in military marksmanship 605.41 have blue eyes and 394.59 brown. In the negro race 974.19 have brown eyes and only 25.31 blue.

Iodine As Water Purifier

One or two drops of tincture of iodine will destroy all germs in a quart of polluted water in twenty or thirty minutes, says Popular Science Monthly, this method of purification being entirely safe and leaving the water tasteless.

England uses nearly twice as much coal per head of the population as any other country.

Thunder-fish, inhabitants of the River Nile, give a sharp electric shock.

Aviation will soon bring about immense improvements in postal and passenger transportation, and will ultimately have revolutionary effects on social life generally, according to four of the world's leaders in the field of communications. These men—Sir Samuel Hoare, British Minister of Aviation; Postmaster-General Harry S. New, of the United States; Director-General Ronge, of the German Post Office; and Dan Bostrom, ex-Cabinet Minister and one of Sweden's greatest shipping men—gave their views to a leading Swedish journal, in reply to a questionnaire.

Sir Samuel Hoare, in his reply, emphasized the need of international co-operation. He favors official encouragement and support for private initiative for the establishment of air lines. Aviation, however, is still young, Sir Samuel believes, and only a great expenditure of thought, energy and capital will bring it to its due place in world development.

Perfection of night flying, according to Postmaster New, is one of the primary requisites to aerial progress. This is a fundamental to development of the postal aviation service, he said. Mr. New declared he saw unlimited possibilities for airplanes in postal communications.

A similar message came from Director Ronge, of Berlin, who said the air might now be regarded as the most important road for progress in mail transportation.

Mr. Bostrom, of Gothenburg, said that it is only a question of a short time until aerial traffic across the continents and the oceans will offer the same commercial possibilities as the railroads and the shipping lines of today, and that aerial vehicles will then have at least as revolutionizing an effect in remodelling social life in general as the locomotives and steamships during the past fifty years.

Americans Buy Farms

Western Canada Opportunities Are Attracting People From the States

"Opportunities in Western Canada are attracting many people from the middle west, both farmers and investors in mineral, timber and other natural products of the country," remarked W. R. Bennett, veteran representative of the Dominion Immigration department at Omaha, Neb., who arrived in Winnipeg with a number of men from Nebraska.

"Four of these gentlemen have purchased large farm areas in the different prairie provinces," he continued. "Not only will several of these in the near future buy farms in Saskatchewan and Alberta, but some are going through to British Columbia, where they are interested in fruit, timber, mineral and fisheries. I do not expect a rush of American immigration from my territory next spring, but I do expect a considerable movement. In fact, many have visited Western Canada from Nebraska this summer to invest money, some to remove here with their families."

Prince Edward Island has 427 farms devoted to the breeding of fur-bearing animals.

A crafty man isn't necessarily a sailor.

ARMISTICE DAY

In Flanders' fields, the poppies blow
Between the crosses, row on row
That mark our place; and in the sky
The larks, still bravely singing fly,
Scarce heard amid the guns below.
We are the dead. Short days ago
We lived, felt dawn, saw sunset glow,
Loved and were loved, and now we lie
In Flanders' fields.
Take up our quarrel with the foe!
To you, from failing hands, we throw
The torch. Be yours to lift it high!
If ye break faith with us who die
We shall not sleep, though popies blow
In Flanders' fields.

At the eleventh hour of the eleventh day in the eleventh month, 1918 there was a great silence throughout the world.

All had been forewarned that the guns of the great war would be silenced, and the swords sheathed.

It was the Armistice—the cessation of hostilities in a war which had appalled civilization for over four years.

Silence seemed to be the outstanding feature of the moment, a silence which was filled with awe and reverence, for men could only breathe that sigh of relief and thankfulness that all was over.

That silence swept over the whole world and the sleeping places of the thousands upon thousands of noble sons caught its message as it passed over them.

It is 'lest we forget' those who sleep 'in Flanders' Fields' that there has been organized an effort to keep fresh in the memory of man, the worth of their life and sacrifice, and the hallowed spots which are marked and beautified by Nature's hand with blood red poppies, Armistice Day is being perpetuated by the observance of the occasion as each November the 11th rolls around.

Next Sunday will be that anniversary. The King has issued the request that all throughout the Empire commemorate the silence which fell over the battle fields on this date in 1918 by a silent and prayerful attitude at that same hour next Sunday. And what better place to observe it than in our own churches. Next Sunday morning every church in town should be well filled with all those who would remember with reverence, respect and thankfulness, the occommemorates. Let us all get a poppy and go to church.

THE PLEBISCITE

The result of the plebiscite on the liquor question last Monday leaves no doubt as to the opinions of a large percentage of the people on this question. It also shows how quickly and decisively public opinion can change when things are not going to their liking. This marked change in the attitude of the general public should serve as a warning to those upon whose shoulders fall the framing of the new legislationmade necessary by the result of the vote; those whose duty it will be to enforce that legislation and those who are affected by it. It was public disgust with the way hotels were run and the disrespect for the laws governing them, that put the old bars out of business. It was also public disgust for the lack of enforcement of the prohibitory laws, that has brought licensed drinking places back again. And the same public which brought about these two changes can be depended upon to bring about another change a few years hence if the occasion requires it.

Although both sacred and secular history proves that the majority is not always right, yet we are living under a system of government in which the majority rules. For this reason—now that the majority has spoken—all should combine in an effort to get the very best legislation possible under the terms as set forth in clause "D." And getting that, see to it that the law is lived up to, to the letter.

An old man who had passed the allotted span, was being sympathized with by a friend because he lost all his teeth but two. "Well," said the old man, "I have a lot for which to be thankful. Thank God the two teeth meet and I am able to bite off my food and chew it." This is the spirit with which we all should approach Thanksgiving season. No matter what our circumstances or conditions may be, there are few, if any, in this country who have not much for which to be thankful. Our greatest trouble is we have so much for which to be thankful and are so accustomed to our many blessings that we forget to offer our thanks to "the Giver of every good and perfect gift." There is no country in the world whose people have more reasons for thankfulness at this time than have the people of this Dominion.

Interesting Report Of Japan Earthquake

Just to hand is the official report of Captain S. Robinson, R. N. R., commander of the Canadian Pacific S. S. Empress of Australia on the Japanese earthquake, the fire and subsequent rescue operations, in all of which Capt. Robinson, his officers and crew played a part which had made them and their ship famous throughout the world. The report deals with the disaster from the moment of the first shock on Saturday, Sept. 1st, till the ship left Yokohama on her return voyage to Vancouver on Wednesday, Sept. 12th, and is more thrilling than any fictitious narrative of wild adventure at sea. Copies of the report, tastefully printed, are available free of charge on application at the C. P. R. Windsor Street offices, Montreal.

Premier Poincare in his Sunday address reaffirmed the French government's unshakeable determination not to accept any reduction whatsoever in the German debt of 132 billion gold marks as fixed by the London conference in 1921.

Here and There

In order to handle the grain this fall the Fort William, Ont. force of 900 elevator men will be increased to 700. From 120 to 150 grain trimmers will be employed.

For the five months to August, 1923, Canadian newsprint exports were valued at $75,302,043 against $27,257,382 for the same period in 1922. Pulp exports in the same period were valued at $20,008,461 against $10,075,533.

Grain loading on Canadian Pacific lines during the month of September totalled 26,376 cars or 36,245,200 bushels. This at the beginning of the loading season which was two weeks late this year on account of the retarded harvest.

This has been the greatest season for automobile tourists Montreal has ever experienced, according to the Secretary of the Automobile Club of Canada. Cars, he stated, had come into the city over the King Edward Highway at the rate of two hundred a day, an unusual number from California, Florida, Carolina and Virginia being noticeable.

There was nearly $120,000,000 increase in the total trade of Canada for the first five months of the current fiscal year, according to a return made by the Department of Customs and Excise. The total trade of the Dominion, according to the return, for the five months ending with August, was $738,000,000, as against $626,000,000 during the same period a year ago. Imports during the period were about $393,000,000, as against $393,000,000 a year ago, while exports of Canadian produce rose from $316,000,000 approximately to $386,000,000.

There is a heavy demand for bushmen, according to the Government Labor Bureau at Montreal. The big lumber companies have been engaging men for the bush, and the prospects are that the demand will be sufficient to make fall and winter conditions good. Wages paid this year by the lumber companies are higher than last year, the rates paid being $40 and $45 a month, whereas a year ago the schedule was down to $26 a month.

With the completion of the harbor works now in progress, Montreal will be in a much better position in 1924 to handle a record flow of grain than ever before. Windmill Point elevator will be increased by 1,250,000 bushels storage capacity, making its total capacity 5,250,000. Four additional shipping berths are being provided at this elevator and will be in commission early next month, and the elevator's loading capacity will be increased from 30,000 to 90,000 bushels an hour.

Reports to the Canadian Pacific Railway, show that there arrived at Winnipeg from the British Isles this year for the purpose of working on the harvest, 11,883 men. Special efforts are being made to find occupation for as many as possible to cover the winter period, and it is stated that it is now probable that a considerable number of these harvesters from Great Britain and the Irish Free State will remain in the Dominion.

Addressing a recent meeting of the Vancouver Board of Trade, President E. W. Beatty, of the Canadian Pacific Railway, announced that the company proposed immediately to add two large modern steamers to its coast fleet in order to take care of increasing tourist traffic over the company's coastal lines. He also announced the early completion of a new pier at this harbor at a cost of several millions, which has been made necessary by the steady development of Canada's trans-Pacific trade.

An Indian named Joe Black Horse, brutally murdered a 16 year old girl named Winnie Tollestrup, near Raymond, Alta., last Friday.

Prison Visitor: "What brought you here?"
Prisoner: "errowing money."
Visitor: "But good gracious, they don't put men in prison for borrowing money."
Prisoner: "Not as a rule; but I had to knock a man down three or four times before he would lend me the money."

CHILDREN COME TO CANADA ON MAGIC CARPET

DICK ANDERSON STUDIES COMPASS

Despite the fact that the Canadian Pacific is the greatest transportation system in the world, it finds it wise and profitable to give individual attention to any little children who may be consigned to its care.

The war broke up families and left orphans in all European countries. Many of these are now being transported to friends and relatives in the United States and Canada. In most cases there is little money, the actual passage being all that can be raised, so there is no question of a companion for the child.

Here is where the great Canadian Pacific becomes nurse, companion, chaperon or guardian for the youthful travellers, transporting them from their homes to the port of embarkation, looking after their comfort and welfare on board ship and, finally, delivering them safe and sound to their destinations in Canada or America. These children, as a rule, are cheerful kiddies who soon work their way into the hearts of their fellow travellers who are generally eager to smooth the paths before the childish feet.

Above are shown some of the little folks who have recently crossed the Atlantic alone. Keith Herz, an 11-year-old boy, travelled from his home in Uscilug on the Russian-Austrian border, to Milwaukee. The company's agent at Warsaw accompanied him to Antwerp, whence he sailed on the S.S. Metagama. A very interesting passenger came over on an August run of the S.S. "Melita," a little 6½-year-old Armenian refugee, who is to become the adopted son of western Canadian farmers, a marvellous change from poverty to plenty. Dick Anderson, the boy being shown the working of the compass by Captain Landy of the S.S. "Melita," was the youngest member of a party of boys sent from England to the Dr. Barnado's Home in North Toronto, Ontario, where waifs from London are given education, a comfortable living and become worthy Canadian citizens.

A Scotch lassie, Rita Tiffey of Dundee, Scotland, boasts of many trophies won by her nimble 9-year-old heels. She owns 4 silver cups and 21 medals won at dancing, and gave much pleasure to all passengers on a recent voyage of the S.S. "Montclare," by executing 16 different dances on her way out to Canada.

Science May Prolong Life

Stated that Principle of Old Age and Death Not Inherent to Cell Life

Dr. Alexis Carrel reported to the French Academy of Medicine in 1912 that he had kept an animal heart, isolated from the body alive and beating for several months. The members were skeptical and many refused to believe the report. The years have passed and the heart is still alive and beating. The cells are all healthy, show no signs of disease, decay, death. They seem to contain the potency of immortality.

If the heart of a dying organism can live indefinitely isolated from the body, under proper protective conditions, it seems to indicate that the principle of old age and death is not inherent to the cell life, but that these conditions are introduced from without. No tree has ever died of any internal condition, but always because assailed by some destructive force outside of itself. The same is apparently true of the human body. When we become wiser than we now are and learn how to protect ourselves from all ravages from without and to obey the laws of life, physical, mental and spiritual, we will live infinitely more effective lives that shall be extended into the centuries.

The race has grown up through ages of experience with the inbred racial expectation of death. The law of the subconscious mind is suggestion. It is the body building power, the superintendent which accepts without question the orders or impressions handed down by the conscious mind and puts them into execution. We have been handing down the suggestion, "You are getting old now, the body might as well slow up, it is almost time to die." The body has reacted to these suggestions, and broken down by wrong living, improper food, insufficient exercise, too little oxygen in the lungs, not enough drinking water, and a hundred other forms of abuse, it has fulfilled the racial expectation.

Now science is showing that there is nothing inherent in the germ cell to justify old age and death. The deadly fallacy of "Three score years and ten" is being exploded. Modern methods of hygiene have greatly increased the span of the average life.

Care of Poultry

Proper Methods of Feeding and Handling for Egg Laying

The following shows the plan of handling and feeding the birds at the Agassiz, B.C., Dominion Experimental Farm, where during the year ending October 30, 1922, four Barred Plymouth Rocks averaged 232.1 per bird. Straw is used for litter and the scratch grains are fed in the litter. The grain mixture consists of equal parts cracked corn, whole wheat and whole oats, and is fed twice a day, each being taken not to have too much grain in the litter at any time. The dry mash is composed of bran 100 parts, shorts 100, crushed oats 100, corn meal 100, beef scrap 50, and charcoal 25. Mash fed from a wall self-feeding hopper, the mash is kept before the birds at all times. Grit and oyster shell are similarly supplied from a small hopper of two compartments, one containing oyster shell, the other containing grit. Green feed is provided in the form of kale, chard, cut clover, or mangels. Skim milk is fed daily, while water is before the birds practically all the time. Inside and near the front door of each pen a box of earth (dust bath) is placed.

Lacked the Equipment

Schoolhouse Commissioner Thomas Glynn says that a foreman on a schoolhouse job recently needed a plasterer. One was sent up from the union headquarters. He looked the job over carefully and then told the foreman that he guessed he would not take the job.

"What's the matter?" queried the foreman.

"There is no place to park my car," was the reply of the plasterer.

"If that's the reason, you couldn't work here anyway, because we only hire plasterers who employ their own chauffeurs," retorted the foreman.—Boston Post.

Travels of a Mail Clerk.

During the thirty-six years that Joseph C. Rock was a clerk in the railway mail service between Chicago and Cleveland, on the New York Central, he travelled 2,997,000 miles, a distance equivalent to 120 times around the earth. He participated in several wrecks, but always escaped injury, and now deems it time to seek retirement.

It was the custom of the ancient Greeks to plant mallow and asphodel round their graves, as the seeds of these plants were supposed to nourish the dead.

Corn Growing on the Prairies

May Soon See Corn Ranking With Other Crops That Have Made Western Canada Famous

The western provinces are only starting out on their careers as corn growing areas say Agricultural and Industrial Progress in Canada. This may be taken as the first year of really serious attention to the commercial production of corn and those to follow will undoubtedly see corn ranking with other crops which have made Western Canada famous.

The first real profession of faith in the future of Western Canada as a corn growing area was made in Southern Alberta when, last fall, the Alberta Corn Growers' Association was formed. Then, to prove that successful propagation was not limited to the southern area of the prairie, Prince Albert, in Saskatchewan, several hundred miles north, held the first corn show to take place in that province, at which locally grown corn was exhibited said to be the equal of that grown anywhere. Now the Saskatchewan Corn Growers' Association has been organized and the first provincial show will be held in Maple Creek in November.

The Alberta association has indeed been active in encouraging the planting of further acreage in every way. From Calgary it has distributed two carloads of corn seed, this going from the international boundary to Peace River and outside the province as far as Victoria in the west and the Eastern Manitoba boundary in the east. The association now has 450 farmers growing corn, who should account for the planting of 27,000 acres of this crop in Alberta this year.

The movement of corn growing in Western Canada is of very recent date, but has been characterized by startling rapidity, and the development of the last five years has been little short of phenomenal. Manitoba, which in 1917 raised 47,600 bushels of corn, produced 1,000 bushels in 1922, an increase of over 250 per cent. for the period. Saskatchewan in the same time increased her production from 31,300 bushels to 187,000 bushels, or by nearly 500 per cent. Alberta increased her yield from 4,000 bushels in 1917 to 82,000 bushels in 1922, an incredible increase of 1,915 per cent.

Manitoba last year achieved an average production of 7.50 tons of fodder corn to the acre, which was worth then $6.00 per ton, or for the total provincial crop $1,296,000. Saskatchewan's average was 4.50 tons to the acre with an average value of $7.00 per ton, or for the entire province $1,309,000. Alberta had an average of 5.25 tons to the acre, each ton being worth $5.00, making for the provincial crop worth $411,000. In all cases the value of an acre of corn was practically double the value of an acre of wheat.

Who's to Grow the Next Newsprint Crop?

By John W. Dafoe, Managing Editor, Manitoba Free Press, and Director Canadian Forestry Association

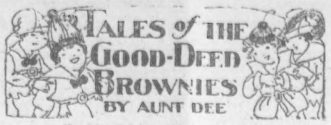
"The question, "Who's to grow the next newsprint crop?" is not as fully speculative as it sounds. More than thirty million newspapers are run off the presses of the United States and Canada every weekday. Their raw material is really a limited-out log of spruce and balsam. We forget sometimes that newsprint is not a synthetic product. Ninety per cent. of every ton is fibre from wooden logs and logs are the harvest of a forest tract.

If the rapid destruction of our forests by human-caused fires proceeds at the present pace of four thousand conflagrations a year, it takes no prophet to foresee a newspaper industry driven into a corner by scarce and costly newsprint, with no hope of relief until new forests have been allowed to grow.

I think the time has arrived when the problem of forest conservation must be taken aboard by the newspaper publishers of Canada. Pulpwood is growing alarmingly scarce and priced will be increasingly gagged by the factors of forest supply and accessibility. We have left forest conservation to the mercies of lumbermen and politically-minded governments, heedless of the fact that the lumberman operates for a living, and it is doubtful if he has any more moral or patriotic responsibility for the state of the forests than a publisher. On the other hand the governments formulate forest policies as public opinion drives, and public opinion, to a greater or less degree, takes its mould from newspaper information.

The newspaper publishers of Canada today are, if they choose to be, the principal actors in the new campaign to stop forest vandalism and place the timber resources on a basis of permanent production.

According to a recent estimate, one-half of the cooking done in the United States is done with gas.



Chuckles Takes a Trip on His Bicycle.

After breakfast on the day the Cobbler gave Chuckles a lesson on riding his bicycle, all the Good-Deed Brownies came out to watch him ride. Queen Lovliness was on her throne and the others grouped themselves around it, leaving an open space in the centre of the field. During his lesson Chuckles had taken several tumbles, so that his little suit was soiled with mud, for it had rained the night before. He brushed it as best he could before breakfast, but Queen Lovliness said when she saw it that he had better give it to the Brownie tailors to be cleaned and wear his best suit for that day.

He was a handsome Brownie, I can tell you, when he mounted his bicycle in his fresh, best clothes. He rode around the field several times and jumped off and on to show that he really could ride. Queen Lovliness said:

"Good work, Chuckles. You know how to ride very well. I think it was very kind of the Cobbler to give you a lesson. Now that you can ride I am going to ask you to do something for me. I have received a note from the head camp, saying that a mile from here down the main road the Cruel Brownies are gathering to make war on this camp. I want to make certain that this is true before I send any of my subjects out to battle. If I sent one of you on your wings, the Cruel Brownies would be sure to see you, for they know you fly and will be looking up in the air for you. If I sent one of my scouts on foot she might be captured. But if you will ride your bicycle the enemy will never think you might come that way, and if they do see you, you could ride away much faster than they could run, and so there will be no danger of your being captured."

You may imagine how excited Chuckles was. Here was another chance for him to prove his love for these kind, Good-Deed Brownies who had taken him into their camp and made a brother of him when he had been a disagreeable Cruel Brownie. His magic wand had done splendid work on its first day by making Discontent (who was now Johnny Jolly) chuckle out loud, and now he hoped his bicycle would be as much help on its first trial.

The other Brownies bustled around helping him get ready for the trip. The Brownie cooks brought him a little basket packed with lunch, which

they fastened under the leather seat of the bicycle, and soon he was all ready to start. All the Brownies in the camp walked to the edge of the field with him, and as he sped down the road they cheered him on his way.

Young At a Hundred

Doctor Says Gladular Treatment Prevents Old Age

One hundred years will eventually be regarded as an infant when glandular treatment becomes better known, Dr. William Held, Chicago, declared on his return from abroad after three months study of that science.

"Men can live to a great age," he said. "Our present knowledge of cellular activity and glandular function has brought to our understanding with accuracy never before attained the causes of premature old age, senility, epilepsy, high blood pressure and disease in general."

Large Enrollment at Universities

Counting all resident students, Columbia University leads with a total enrollment of 27,325. California is second with 20,953. Next in order are the University of Pennsylvania with 14,534, College of the City of New York with 14,067, and New York University with 12,336.

Wages of Farm Wife

"If you had to pay the farm wife a salary based on her actual worth, sh ecould command at least $2,800 a year, as seamstress, laundress, cook, nurse, assistant hired man, general manager, and several other tasks," declares Professor Ruby Green Smith, of Cornell University.

Civil Engineer a Plasterer

Could Make More Money Than If He Became a Professor

A newspaper woman who has been writing up the steel mills remarked on the number of workers who came to their automobiles. A dispatch from the zinc mines in Illinois where there has been a strike, spoke of most of the strikers coming back to work in automobiles. Accounts of Herrin in a year remarked on the large parking space set aside for the automobiles of the miners. And now we learn from Evanston, Ill., seat of a great university, that wages of more than $100 a week paid to plasterers are diverting students from the Gospel ministry, and a civil engineer with many degrees refused professorship because he could make so much more money plastering. — Philadelphia Record.

Tourists at Banff Park

The tourist traffic through Banff Park for the month of August exceeded all previous records, a total of 3,052 autos passing through the East Gate and 1,945 from the Windermere Road on the west. A total of 7,197 cars have visited the new auto park in Banff since its official opening on June 14th.

In Northern India the African marigold is held as a sacred flower.

Story of Determination

How a Crippled Child Became a Successful Business Man in Spite of Physical Disabilities

Nearly forty years ago a Chicago newsboy, whose name was Mike Dowling, went out to the state of Minnesota to herd cattle. He was only fourteen. On an errand to a distant farm he was caught in a blizzard and was frozen so badly that he lost both feet and both his hands.

Before he was fifteen the lad found himself penniless. He had no one to help him, for he was an orphan. With little education he seemed helpless, but there was a strong, brave heart in the lad's body.

When he was sent to the charity board of his county, he told the commissioner that if they would give him a year's school and supply such help as could be made for him, he would earn his own living.

How he kept his promise is told by Earl Christmas, in the Dearborn Independent:

"In that year at Carleton, Dowling dug in with all his might. He thought that if he ever he could learn how to study, he might go on alone. When the year was over, he got a place teaching a country school. He was on his way to independence.

"He taught a country school for seven years, becoming later a city superintendent of schools. He painted fences and ran a skating rink during the vacations. He did all kinds of jobs. He ran a weekly newspaper. In time he got into the real estate business, and eventually became the president of a bank at Olivia, Minnesota.

"He was speaker of the Minnesota House of Representatives, and at one time was urged as a candidate for Governor. He was President of the Minnesota Bankers' Association, and was active in organizing the Yellowstone Trail Association.

"Dowling did everything that other men do. He drove his own automobile on long, cross-country trips. He danced. He went hunting for big game. He had a fine home, with a wife and three children, and amassed enough property to provide comfortably for the future. He had nearly all the good things of life that come to any successful man."

If that had been all, the story of Mike Dowling might not have been told here, and the man would not have been held dear by his countrymen.

The once crippled boy never lost an opportunity of helping other boys and men who, because they were crippled, were in danger of losing heart. He helped to support the Minnesota Hospital for Crippled Children. He sent lame boys to school.—Victoria Daily Colonist.

Old Battlefields Vanishing

Major-General MacBrien has returned to London on conclusion of his tour of the Canadian battlefields in France. He was much impressed by the rapid construction, both in France and Belgium and said that very little of the Canadian battlefields, except Vimy Ridge, remained in the old condition. General MacBrien considers the site for the war memorial at St. Julien and the sites for the other memorials were very well chosen.

Sanitation For Poultry

Many cities have a low death rate because of the sanitary requirements, good water supply and common sense of their citizens. A poultry farm is a small chicken city filled with birds of a low order of intelligence. The owner is responsible for the sanitation and good water supply. He must furnish all of the common sense used in the management.

"YOUR TEETH"

THE HUMAN JAWS

By Rea Proctor McGee, M.D., D.D.S., Pittsburgh, Pa.

Every bone in the body is fashioned to stand the particular strain that comes to its own zone.

The shape and strength and blood supply of each bone is just right for that bone, just as a well balanced piece of machinery must have every part fitted to do its work and must have every part strong enough to last without too much weight or bulk.

The bones of the jaw have as a protection from the pressure of chewing only a very thin membrane composed of periosteum and mucosa which we call the muco-periosteum.

The teeth are set in sockets, properly called alveoli, which are simply holes in the bone that fit the roots of the teeth.

There is a membrane that lines the socket and at the same time covers the tooth root. This is a double facet membrane which protects and nourished both the bony surface and the surface of the tooth root. The jaws have transmitted to them the pressure that is made upon the teeth in chewing and the only thing that acts as a shock absorber is this one little thin membrane that lines the socket. As much as two hundred and fifty pounds pressure to the square inch is frequently exerted upon the teeth. Whenever a tooth is lost the work that the other teeth do is increased so that the pressure of chewing is no longer distributed over the whole jaw, but is confined to those spots where the teeth remain.

Is it any wonder that the bones of the jaw sometimes become so irritated from over-work and so inflamed from abscessed teeth that considerable portions of the bone itself may be lost?

If the teeth are kept in a state of health the bones of the jaw will usually remain strong and vigorous as nature intended they should be.

Why Mixed Farming Pays

A Sure Profit in Winter Feeding of Beef Cattle

While no beef cattle are kept for breeding at the Rosthern, Saskatchewan, Dominion Experimental Station, for the past seven or eight years, steers have been purchased in the fall for winter feeding, and in every case when sold in the spring, excepting in 1921, a profit has been realized, after allowing the higher market value for the cattle consigned. Twice the cattle were purchased directly from the farmers and five times from dealers. In every case the cattle came from districts where oats and barley yield well and, in most cases, where prairie hay may be had at much lower cost than at Rosthern. If, claims the Superintendent, feeding under such circumstances can be done profitably at the Rosthern station, what income, how much greater would be its advantage to the livestock grower. Feeding cattle in winter, continues the report, furnishes employment when there is little else to do, enough rough feed, such as oat straw, barley straw and screenings not otherwise readily marketable; utilizes wheat straw as bedding, returns fertilizer to the land, and turns over at a good profit everything used, including hay, straw and grain as well as the cattle themselves.

An experiment conducted at the station in 1921-22 to compare the feed value of turnips and ensilage indicated that turnip and sunflower silage have feeding values nearly equal when fed in conjunction with a full meal ration.

Passenger Asks "How"

Pullman plans for a shelf five feet and two inches long and ten inches wide, in place of the much condemned bunk, in their sleeping berths may be of advantage in neatly laying one's clothes away for the night, but if any of the present limited space is to be given up for shelf-room, how is a non-acrobatic mortal ever going to get the clothes off so that they can be neatly laid away.—Philadelphia Bulletin.

Cruelty to Insects

On the proposal of Sir Walter de Frece, reptiles and fish are added to the animals in England protected by the "cruelty to animals" bill. Sir Walter wanted to put in "insects," but agreed to drop it at once when it was pointed out that it would be difficult to convict when a man was cruel to a flea.

B.C. Lumbering Operations

One of the largest lumbering operations in British Columbia is about to be undertaken by the Weyerhauser interests. A mill, it is estimated, will cost $1,500,000, will be operated at Chemainus, on Vancouver Island, in that locality the big American timber and lumber corporations holds thousands of acres of fine timber.

Canadian National Building at the British Empire Exhibition

An imposing building is to be erected by the Canadian National Railways at the British Empire Exhibition. Contracts have been placed and the construction will be commenced immediately. The building is of a classic style of architecture of the Canadian Government building at the Exhibition. The Canadian National building is on a site immediately next to the Canadian Government building and in one of the most prominent sections of the exhibition grounds. The building is 90 ft. x 110 ft., and in addition to a very comprehensive display of exhibits, including agriculture, horticulture, mining, industrial and tourist features, there will be a cinematograph hall accommodating 250 people, in which daily shows will be given, where films that are being specially made this year will be projected, depicting the attractions of Canada. This building will be one of the handsomest structures in the group of the buildings at the British Empire Exhibition. The architect is Mr. Eustache G. Bird, A.R.I.B.A., of Toronto, Canada.

(Continued)

That house and garden was planned so often that at last I was almost convinced of its reality. Eventually Murray began to make sketches of it that would have amused an architect, no doubt, but that gave us immense satisfaction. His ideal was, "Big rooms, even if there aren't very many of them, and lots of light." Mine, a home planned so skilfully that my work would take as little time as possible, and in which beauty and comfort would be combined. I love housekeeping, but I pray to be delivered from the house that demands all one's energy. I have sometimes feared that under unfavorable conditions I might develop into that menace to civilization, a model housekeeper. I am rather inclined to be orderly and tidy, and to want everything in its place, but I check the tendency whenever I can—I do not want a house that is not a home, where the children cannot play for fear of scratching the floors, and where the washing of the dinner dishes is more important than a chat with an old friend.

Our home was not all that we discussed. Like so many of the men who came back, Murray had a firm conviction that, if our country were to progress as it should, many things must be changed. Just how these changes were to be brought about he was not so sure as were some of the men who had carried home with them ideas of a more or less socialistic nature. Of the old Canadian stock, Murray had no patience with the agitators who prophesied the overturning of the whole social system. Injustices and inequalities everyone could see, but I thought Murray put it very clearly when he said, "What we need, Margaret-Anne, is to hold the balance true between the individual and the community. This cry of 'Let the Government do it,' will produce citizens with no backbone, if we are not mighty careful." Anything that would lessen individual responsibility and initiative he felt to be as great a danger as the conditions that made it possible for one man to amass wealth and power at the expense of those less fortunate.

All this was new to me, for in the manless home of my girlhood I had never heard such things discussed. Naturally I found Murray's views very interesting, and they showed me a new side of him, but, I must admit, that at first made me feel rather small and ignorant! I said something of the sort to him once and he laughed rather apologetically and said that he too had a confession to make, that he had been very much surprised to find me so good a housekeeper and so well satisfied with my new life and all its restrictions. Those ridiculous men, it seems always to surprise them that the modern woman may be capable and independent in the business or professional world and still as homeloving and domestic, when her time comes as Solomon's model wife ever was!

And of course we planned the children's future. One stormy night we even got so far as the right sort of wife for Rupert, but the subject ended suddenly when I said something about Nicolas being of the type that marries young. There wasn't a man on earth good enough for his daughter, Murray declared. Whereupon I pointed out that there had been one good enough for her mother.

"Oh, but you took a chance," said Murray, with a rather sheepish grin, "and I am not sure that I am."

If I know my daughter she will take a chance too.

Rupert, we thought, would probably be a minister! His love of reading, preaching to Nicolas, and his interest in theological matters was keen, though his knowledge was not always to be borne with a serious face.

I found Nicolas in tears one day because Rupert had insisted her tabby kitten would not go to Heaven, his Sunday School teacher had said so.

"An', he says, 'without any dogs,' an' Kitty is so very afraid of dogs!" she sobbed.

The children were not quite five at that time, and I used sometimes to wish that Rupert's memory were not quite so retentive, for he would pick up phrases too deep for him and then worry Nicolas to tears over her mistakes. He was always quite willing to little chap, but I have an uneasy feeling that a child who is too good is in all probability somewhat lacking in vitality, and I was far more anxious about him at that time than I ever was about Nicolas.

Murray was very proud of his son's old-fashioned ways and his quick brain, and he used to tell me not to worry, that preachers ran in the Alywin family, and that he wished Grandpa Alywin could see Rupert. But to me it seemed far more natural that Nicolas should giggle softly in church when a fly crawled over the bald head of a man in front of us, and then cuddle against Murray's shoulder and sleep all through the sermon, than that Rupert should sit quietly through the long service, with an expression of angelic seriousness on his chubby little face. I suppose it was really the atmosphere to which he was susceptible, but I welcomed every evidence that he was "a real boy," and was glad when he was noisy and even rough—and he always took his bumps like a man, bless him.

We never spoke much of a career for Nicolas. We hoped that she would go through college, but Murray had what I used to tell him were prehistoric ideas about a girl's working unless from necessity. At heart I agreed with him, though for disciplinary purposes I never admitted it. Nothing would please me more than to have my daughter always with me until she goes to a home of her own, but there is plenty of time to think about that. And if Nicolas wants to make her own way in the world it is for her to decide.

CHAPTER EIGHT

Early in the New Year Murray's young brother Teddy came to Winnipeg. We had no room for him, but of course he spent a great deal of his spare time with us.

Teddy was a nice lad, but somewhat of a responsibility. He had enlisted on his eighteenth birthday, but was still in England when the Armistice was signed, and now, at twenty, he was restless and unsettled. He did not know what he wanted to do nor what he wanted to be, except that he did not want to go to college as his father and mother wished. According to Mrs. Alywin's letters, she and his father had with difficulty kept him from joining the Mounted Police, later he had spoken of going to the Peace River country; and again he had to be persuaded to give up the idea of going to South America as clerk to a mining engineer whose acquaintance he had made in England.

"I thought this time," Mrs. Alywin wrote to Murray," that I had persuaded him to go back to the University, for I could make it so plain to him that without higher qualifications he could never expect to hold any but a subordinate position."

However, the thought of settling down to several years of study was too much for Teddy, and soon afterwards he wrote to Murray to ask what we thought of his coming to Winnipeg for a change.

Murray threw the letter across the table to me after he had read it.

"What do you think?" he asked. "It might be just the thing for the kid to come here and do for himself for a while. Of course we would have to keep an eye on him, but we would do that as well as Dad and Mother—maybe he'd take to it more kindly from us."

I had no objections to make. Teddy was only fourteen when I had visited at the Alywin home, the one boy in a houseful of girls, but we had become very good friends—perhaps because he admired Murray so tremendously! I thought it would be rather nice to have him near us. After all, between a boy of fourteen and one of twenty there is no very marked difference, and I was prepared to like Teddy as much as ever. Then, too, I felt that it would be a good thing for them both for him to be with Murray.

I had always felt rather guilty when I thought that on account of our marriage Murray had been rather suddenly cut off from his family, though I must say that none of the Alywins ever gave me the least reason to think that they blamed either of us. Just the same, I knew that if it had not been for me and the children Murray would have spent more than a week with his father and mother on his way home. And one of my pet plans was that all four of us should go East for Christmas in 1920.

Perhaps it is because I have no family circle of my own that I think it so precious a possession, and that I was so glad to think that Murray and his only brother would be together once more.

Teddy came in February, got a position in one of the banks and a room at the Y.M.C.A., and then proceeded to "land" his more or less unknown feet.

He had grown at least a foot since I had seen him in 1914, and was now much taller than Murray—one of those nice-looking long boys, with a child's face on top of a man's body.

Of course he had been spoiled by his adoring sisters one could see at a glance, also that army life had unsettled him, but I always held that he had no really alarming symptoms—but more serious than his spoiled and pardonable tendency to take people at their own valuation. Murray, older and more practical, was inclined to be impatient with him. "He has all sorts of brains, but no sense," he would say. "It is no wonder God couldn't do anything with him, it is discipline the cub needs, and I'll see that he gets it."

I have never discovered just what Murray means by discipline, but I do know that Teddy never decided for that he did not get it. His first scrape was characteristic of him. He had become infatuated with one of the girls in the office—a pretty, empty-headed flapper, with no more brains than Teddy himself—and before long he confessed to Murray that dances and chocolates and taxi fares had made so big a hole in his salary that he could not pay back the money he had borrowed from one of the office boys to make the first payment on a dress suit.

Murray, I understand, gave him a cheque accompanied by a heart-to-heart talk, and for a while he seemed almost painfully good. He was "through with girls," and by I know not what means or effects he paid off Murray half the money he had borrowed at the end of the month.

Such miracles do not happen nowadays, and soon Teddy was going to as many dances as ever. But I noticed that he so far kept his resolution as to divide his affections among half a dozen girls instead of confining them to one. So far as I know, he kept out of debt, though he was chronically "broke." The trouble with Teddy was that he was too popular, every one liked him, and he had drifted into a clique where it was hard for him not to be able to do what the other boys did. And, as was only natural, the sort of people with whom he should have liked him to associate were "slow."

(To be continued)

Many Rejections

Out of 106,071 offering to join the British army, over 51,000 were rejected.

This may easily be accounted for by the resumption of its high standard of admission and the many applicants whose physique was indelibly affected by the war.—Hamilton Spectator.

An engineer declares that 5,000 people now do the work, with the aid of machinery, which needed 16,000,000 persons to do a generation or so ago.

Quickly Relieves Constipation

Don't let constipation poison your blood and spoil your energy. If your liver and bowels don't work properly take CARTER'S Little Liver Pills today and your trouble will be relieved. For dizziness, lack of appetite, headache and blotchy skin try them. Purely vegetable. Small Pill — Small Dose — Small Price

CARTER'S LITTLE LIVER PILLS

MRS. ANDERSON TELLS WOMEN

How Backache and Periodic Pains Yield to Lydia E. Pinkham's Vegetable Compound

Leslie, Sask.—"For about a year I was troubled with a distressing downbearing pain before and during the periods, and from terrible headaches and backache. I hated to go to a doctor, and as I knew several women who had taken Lydia E. Pinkham's Vegetable Compound with good results, I finally bought some and took four bottles of it. I certainly do recommend it to every woman with troubles like mine. I feel fine now and hope to be able to keep your medicine on hand at all times, as no woman ought to be without it in the house."—Mrs. OSCAR A. ANDERSON, Box 15, Leslie, Sask.

Mrs. Kelsey Adds Her Testimony

Copenhagen, N. Y.—"I read your advertisement in the papers and my husband induced me to take Lydia E. Pinkham's Vegetable Compound to get relief from pain in the backache. I was so weak that I could not walk at times. Now I can do my housework and help my husband out doors, too, I am willing for you to publish this letter if you think it will help others."—Mrs. HERBERT KELSEY, R.F.D., Copenhagen, N. Y.

Sick and ailing women everywhere in the Dominion should try Lydia E. Pinkham's Vegetable Compound before they give up hope of recovery. C

W. N. U. 1493

Cars Are Designed To Please Ladies

Boudoir Mirrors and Chairs Features Of C.N.R. New Sleeping Cars

Wing boudoir mirrors for the ladies; an upper berth out of which one cannot fall; thermos bottles in which water can be kept cold; electrically controlled exhaust fans designed to purify the air; radiant buttons on the bells and electric light controls so that they can be operated with ease in the dark; these are just a few of the features of the new type of Montreal-built sleeping cars which, to the number of thirty, are being constructed for the Canadian National Railways and which are being placed in service on the first transcontinental route at the rate of one car a day. The first of the new pullmans left Montreal last Saturday and every day thereafter one of the all-steel latest model sleeping car has been attached to the "Continental Limited." All who have travelled in or inspected the new car declare it to be the last word in sleeping car architecture and construction.

These cars have been built for transcontinental service, particular attention has been paid to the comfort and convenience of the traveller who has to spend several days on board train. The length of the car has been increased by about two feet, giving it a length of 81 feet over all. This extra space has been added to the ladies' dressing room, which is the acme of perfection. The dressing room contains three separate wash basins. In front of each there is a wing mirror, both wings being movable so that the traveller can adjust them to the desired angle. Above each mirror is a separately controlled electric light, and at the side a sanitary towel case, the top of which has been designed to hold toilet articles. By placing the door leading to this room at a different angle and by making use of a semi-circular curtain, the utmost privacy has been secured for the occupants. Boudoir chairs permit the ladies to sit in comfort while making their toilet.

Sleeping arrangements have been considerably improved by the adoption of a separate set of curtains for the upper berth and lower berths. This provides absolute privacy for the occupants of each berth and a device which permits the fastening of curtain of the upper berth around a bar placed it impossible for children or any occupant to fall out.

Particular attention has been paid to the ventilating system. In addition to the automatic ventilators on the roof of the car, there is an electrically controlled exhaust fan connected with the body of the car as well as with the smoker, thus ensuring cleanliness of air at all times. Heating arrangements are improved also, the installation of a control device permitting the heat to pass through two, three or five pipes as desired.

Everything possible to ensure the safety of the travelling public is done. The cars weigh 169,400 pounds and are locked to the trucks. The passage ways have been widened and the corners rounded and each car has been equipped with an anti-telescoping device which provides the maximum of safety in the event of an accident. The cars are beautifully upholstered in green English made plush. Lighting arrangements have been perfected and the windows have been equipped with weather strips. There are also many added improvements designed to make as comfortable as possible the journey of the traveller who has to spend a number of days on board train.

The new cars are being constructed by the Canadian Car and Foundry Company, of Montreal, and are part of the equipment order placed last spring. They are named after stations along the system, the names being: Algonquin, Allandale, Amherst, Battleford, Biggar, Brantford, Campbellton, Dorval, Goderich, Hamilton, Ingersoll, Jellicoe, Kitchener, Lachine, Lindsay, London, Matapedia, Melville, Oshawa, Pembroke, Regina, Restigouche, Sarnia, Stratford, St. Catharines, St. Annes, Wainwright, Watrous, Windsor and Woodstock.

The Algonquin was the name of the first car to arrive in the west and it brought forth many expressions of admiration along "The National Way."

Yes, They Have No Sense

"I have just though of an easy way to get rich quick," said the president of the music publishing firm.

"Fire!" replied the vice-president. "What's the idea "

"Let's pick out some good lunatic asylum and get the inmates to write songs for us."—Baltimore American.

Me-Ow

The Seaside Soprano.—Did you notice how my voice filled the hall yesterday night?

The Seaside Soubrette.—Yes, dear, in fact, I noticed several leaving to make room for it.—London Mail.

Of the registrants, 35.22 per cent were held for military service.

Hawaii's Lake of Fire

Molten Lava Always Disappears When An Earthquake Occurs

According to messages received at Department of the Interior at Washington from Superintendent Boles of Hawaii National Park, Kilauea's Lake of Living Fire has again drained out as a result of subterranean disturbances, the surface of the lake of liquid lava having dropped 600 feet below the rim. The east end of the park area was also badly broken up by earthquakes, the cracks emitting gas clouds of flame and lava.

In May, 1922, as a result of similar disturbances, the Lake of Living Fire disappeared, but in September of the same year the crater began to fill again. In May of this year the surface of the lake had risen to within 150 feet of the rim.

The most remarkable recovery was on May 12, when the surface of the lake rose thirty feet in one day, making a total volume of molten lava poured out by the sources of fountains of over 2,000,000 cubic yards in one day. The area of the lake on that day was over forty-five acres, or nearly eighteen city blocks.

Mother! Give Sick Baby "California Fig Syrup"

Harmless Laxative to Clean Liver and Bowels of Baby or Child

Even constipated, bilious, feverish, or sick, colic Babies and Children love to take genuine "California Fig Syrup." No other laxative regulates the tender little bowels so nicely. It sweetens the stomach and starts the liver and bowels acting without griping. Contains no narcotics or soothing drugs. Say "California" to your druggist and avoid counterfeits! Insist upon genuine "California Fig Syrup" which contains directions.

Oldest Plant In World

Was Preserved for Centuries in Illinois Coal Mine

The University of Chicago has come into possession of the oldest specimen of a highly developed plant ever discovered in America, or the rest of the world, according to Dr. Aloph C. Noe, professor of paleotany.

The plant, which has been preserved for centuries in all its minuteness, was found in a so-called coal ball in a mine near Harrisburg, Illinois. Coal balls are round lumps of limestone which form in a coal seam and usually prevent plants from carbonizing.

While all the vegetable matter about the ball becomes shapeless black coal, the forms of life within the coal ball are perfectly preserved. Our whole knowledge of the ancient plants which grew millions of years ago is derived. Dr. Noe says, from these lumps found in coal mines.

"My daughter's music," sighed the mother; "has been a great expense."

"Indeed?" returned the guest. "Some neighbor sued you. I suppose?"—Boston Traveler.

Children in India have to learn the multiplication table up to forty times forty, and this is further complicated by the introduction of fractional parts

Minard's Liniment for Sprains

Fooling the Hen

Clock Regulates Lights and Adds to Working Day

An invention for the use of the farmer is the "cackle switch," designed to increase the waking hours of hens and, correspondingly, the egg yield. This is a clock equipped with an on and off switch by means of which the electric lights in the hen house will be automatically turned on at dark or early in the morning and turned off when the desired number of hours of light have been added to the hen's working day.—Utility Bulletin.

CHAPPED HANDS

Minard's eases and heals them. Rub it on before you go out in the wind. A good preventive.

MINARD'S "KING OF PAIN" LINIMENT

Too Much Silence Harmful

People Could Not Stand a World Without Noise

We all complain of noise—especially those Londoners who live in flats, however highly rented—but would a Londoner's nerves be any better for a world of silence?

That man who wanted an ejectment order against Nature who are so quiet that they upset him, giving him the feeling that, as he says, "a silent horror seems to be brooding over the house," does not speak without reason. It is all very well for travellers to tell you how they long for the great silence of the desert again; but the silence of the spacious wheat plains, for instance, month after month, year after year, like the silence of the mountains of the wild places of the earth, reduces some men and women to morbidity and moroseness and sometimes drives them insane.

Silence, in fact, should be taken in strict moderation.—London Daily Mail.

Bicycle manufacturing was started in France in 1863.

ECZEMA ON BODY IN PIMPLES

Itching Intense. Could Not Sleep. Cuticura Heals.

"Eczema broke out on my body in small pimples with white heads. At first there were just a few small spots but it quickly spread, causing intense itching and discomfort. My clothing seemed to aggravate the breaking out, and I could not sleep well at night.

"A friend gave me a sample of Cuticura Soap and Ointment and after using them I got relief so purchased more, and after using one cake of Soap and one box of Ointment I was healed." (Signed) Miss Maybelle Brett, Pullman, Wash.

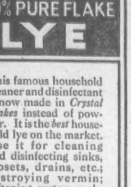
Give Cuticura Soap, Ointment and Talcum the care of your skin.

Sample Each Free by Mail. Address: "Cuticura, Dept. 14A St. Paul St. W., Montreal." Sold everywhere. Soap 25c. Ointment 25 and 50c. Talcum 25c. Cuticura Soap shaves without mug.

GILLETT'S
100% PURE FLAKE LYE

This famous household cleaner and disinfectant is now made in *Crystal Flakes* instead of powder. It is the *best* household lye on the market. Use it for cleaning and disinfecting sinks, closets, drains, etc.; destroying vermin; softening water; making soap; cleaning floors, greasy pots and pans, etc.; removing paint, etc.

Avoid inferior and dangerous substitutes. Get the genuine article in cans as reproduced below.



WORLD HAPPENINGS BRIEFLY TOLD

Vancouver port has already doubled last year's grain handling.

King Alfonso has signed a decree abolishing the jury system in trials in Spain.

Eighty per cent. of the harvesters who came here from Great Britain will remain in Western Canada, Canadian National Railway officials estimate.

Loss to the Japanese navy by the earthquake is estimated at 150,000,000 yen ($50,000,000) by Admiral Taka-Trabe, Minister of the Navy.

Warning to unemployed not to flock to the coast in search of work was issued by J. D. McNiven, Deputy Minister of Labor.

For twenty years a missionary to Japan for the Methodist Church, and a graduate of McGill class, 1894, Miss Margaret Craig, 51, died at Montreal, Oct. 1.

Oct. 2 marked the one hundred and sixty-fifth anniversary of the meeting on October 2, 1758, at Halifax, of the first popular assembly in British North America.

An official dispatch to the Japanese embassy, Washington, places the number of known dead in the earthquake zone at 103,000, the injured at 125,000, and the missing at 235,000.

By a decree of the Minister of the Interior the sale of Simplicissimus, the German comic newspaper, has been forbidden in France, and the police have received orders to seize copies already in circulation.

The Islands of Imbros and Tenedos, at the entrance to the Dardanelles, were handed over by Greece to the Turkish authorities. These islands comprise the last portion of Turkish territory occupied by Greece which had to be returned to Turkey in conformity with the Lausanne peace treaty.

WELL-MERITED SUCCESS

A distinguished citizen, honored politically and professionally, Dr. R. V. Pierce, whose picture appears above, made a success few have equalled. His pure herbal remedies which have stood the test for fifty years are still among the "best sellers." Dr. Pierce's Golden Medical Discovery is a blood medicine and stomach alterative. It clears the skin, beautifies it, increases the blood supply and the circulation, and pimples and eruptions vanish quickly. Beauty is but skin deep and good blood is to-death both. For your blood to be good, your stomach must be in condition, your liver active. This Discovery of Doctor Pierce's puts you in fine condition, with all the organs active. Ask your nearest druggist for Doctor Pierce's Golden Medical Discovery, in tablets or liquid form, or send 10 cents for trial package of tablets to Dr. Pierce's Laboratory in Bridgeburg, Ontario.

History of Electric Light

World-Wide Illuminant Made Possible By Years of Research

"History of Electric Light" is the title of a pamphlet just issued by the Smithsonian Institution dealing with a subject of almost universal interest. Many of the inventions described in it are now exhibited in the United States National Museum in the divisions of mineral and mechanical technology and the numerous illustrations are largely taken from photographs of these. At the present time, there are about 350 million incandescent and about 200,000 magnetic arc lamps in use in the United States alone and about an equal number of incandescent lamps in use in other countries. This world-wide use of electricity as an illuminant was made possible by patient research and experimentation through a period of one hundred and twenty-three years by many men of many nationalities, each approaching the problem from his individual viewpoint, and each with widely differing aims to be accomplished by its solution—the scientist solely wishing to demonstrate the existence of certain physical laws, the practical electrician taking up the work of the scientist and applying it to everyday problems, such as the lighting of streets and houses. The successive steps in the development of our present well-known forms of the incandescent electric light are clearly and interestingly presented in this pamphlet.

Old Folks Need A Mild Bowel Tonic

Constipation Best Overcome By the Occasional Use of Dr. Hamilton's Pills

DR. HAMILTON'S PILLS

Because Active, Yet Very Mild, Old Folks Prefer Dr. Hamilton's Pills

Thousand of people, young and old, stop habitual constipation by using Dr. Hamilton's Pills. This mild, yet active medicine, is noted for its promptness in restoring the bowels to a condition where they will perform their needful function at a certain time each day.

You'll improve your health, you'll eat well, digest well and look better if you regulate your system with Dr. Hamilton's Pills. 25c at all dealers.

GUARD THE BABY AGAINST COLDS

To guard the baby against colds nothing can equal Baby's Own Tablets. The Tablets are a mild laxative that will keep the little one's stomach and bowels working regularly. It is a recognized fact that where the stomach and bowels are in good order that colds will not exist; that the health of the little one will be good and that he will thrive and be happy and good-natured. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Electric Lantern

A new portable electric light that has been patented is shaped like an old-time oil lantern. The battery is carried in the bottom, in place of the oil reservoir in the old style lantern, and the lamp replaces the usual wick, being protected by a heavy glass globe. Always ready for use, it is not affected by jolts and jars, and will burn steadily for a long time. When the battery is exhausted, it can be replaced in less time than it takes to fill the old-time lantern. It has the added advantage of being safer and clean, and it cannot be blown out.

Ship Poultry to Eastern Canada

Improvements that warrant much optimism for future business, have been made in the shipping of poultry to Eastern Canada, according to a statement of J. H. Hare, Alberta Provincial Poultry Commissioner. Eastern dealers have favorably commented upon recent shipments as having been satisfactory.

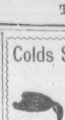
Coal Output Increases

According to figures provided by the preliminary report on mineral production in Canada for the first six months of 1923, Alberta has produced in those six months a total of 3,312,991 tons of coal, compared with 2,358,296 in the same period of 1922.

Did you ever see a fellow walking around on his uppers while waiting for a dead man's shoes.

Minard's Liniment for Headache

Colds Stopped In Ten Minutes



There is a new remedy that is very pleasant—it fills the nose, throat and lungs with a healing balsam from the pine woods, and utilizes that marvelous antiseptic of the Blue Gum Tree of Australia.

The remedy is "CATARRHOZONE" —and you can't find its equal for colds, coughs or catarrh. Composed of medicinal pine essences—a remedy of nature, that's what CATARRHOZONE is, and you'll find it mighty quick to act and certain to stop your cold.

Don't dope your stomach with cough mixtures — use CATARRHOZONE, which is scientific and certain; it will act quickly. Two months' treatment guaranteed, costs $1.00; small (trial) size 50c. Sold by druggists everywhere. By mail from The Catarrhozone Co., Montreal.

Bananas As Food

Farm Complete Diet of One-Fourth of Human Race

America should have some bananas. Because if she hasn't she is not getting her share of one of the most important foods in the world. The banana is the most prolific food plant known and forms the complete diet of one-fourth of the human race, says the Milwaukee Journal.

It is a native of the East Indies, but is cultivated in all tropical countries. It requires very little attention from the natives, and is almost a weed in the rapidity of its increase. Once a plantation is started, all that is necessary for its perpetuation is the control of the many root stalks which the plant shoots out. The plants mature in a few months, and produce a single bunch of fruit each.

Bananas do not grow on the plant as they hang in the store, but with small end of the fruit pointing upward, toward the sun. A standard sized bunch has nine "hands," with from 10 to 15 bananas to a "hand."

Only one or two varieties of bananas are exported large distances from the tropical plantations. About sixty species exist, some with fruit as large as a good sized rolling pin. The many delicious varieties never reach America because of their rapid deterioration.

Holloway's Corn Remover takes the corn out by the roots. Try it and prove it.

Too Much Entertainment

Dominion Premiers Cannot Accept All Hospitality Shown

With great tact the Dominion premiers, who are in London for the Imperial Conference are understood to have made known the fact that it was impossible for them to keep on working during the conference if they accept all the hospitality that has been designed for them and are continually eating.

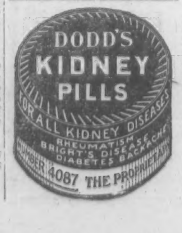
In consequence of this gentle hint, the prospective hosts of the visiting premiers do not expect them to attend more than a small percentage of the banquets which they have arranged and have intimated that the menus at these will be made less formidable than at first intended.

The Daily Mail, applauding this decision, recalls the Imperial Conference of 1907 when the late Sir Wilfrid Laurier, the late Premier Botha of South Africa, and the late Dr. Leader Starr Jamieson, Premier of Cape Colony, were ill simultaneously through over-banqueting while attending the conference.

The Man With Asthma almost longs for death to end his suffering. He sees ahead only years of endless torment with intervals of rest which are themselves fraught with never ceasing fear of renewed attacks. Let him turn to Dr. J. D. Kellogg's Asthma Remedy and know what complete relief it can give. Let him but use it faithfully and he will find his asthma a thing of the past.

Platinum Found With Other Metals

Platinum is found in small grey particles along with other metals, including gold and chrome-iron. Occasionally it is discovered in the form of nuggets, which are naturally extremely valuable. A 25-pound nugget of platinum would at the present time be worth over $30,000.



Distribute Handsome Profits

Hearst Music Publishers Are Making Remarkable Progress

The Hearst Music Publishers, Limited, announced in Winnipeg last week that options had been secured and plans were in hand for the construction of their own head office building, in a prominent downtown location in that city. This information is of interest to the public, as well as to the numerous shareholders in that company throughout Manitoba, as marking the remarkable progress being made by this company.

This company, formed by Manitoba men, has in two years created a continent-wide organization for the sale and distribution of popular songs, which it produces and publishes, and has made and distributed profits which cannot but be highly gratifying to the fortunate individuals who participated in its initial organization. The stock of this company has recently been taken off the market, and none is now available. The last dividend declared by the company, for distribution about October 15 is of 10 per cent. cash, making total distribution to shareholders during 1923 of 50 per cent. in cash and 45 per cent. in stock. This has worked out to give each shareholder who possessed a paid-up share of $100 on December 31 last, $58.25 in dividends during the year, besides an addition of 45 per cent. to his stock.

The company has distributed many of its popular songs in very large editions. For some time it has had branch offices established in Toronto and New York, and is now opening branches in Chicago, Philadelphia, Boston, Pittsburgh, St. Louis and San Francisco, in the U.S.A., in Montreal and Vancouver, in Canada, and in Melbourne, Australia. The company also distributes its songs in Great Britain, through the old established firm of B. Feldman & Co., London.

Joseph X. Hearst, of Winnipeg, is internationally known as a song writer, is President and Managing Director of the company. John W. Wilton, Ex.-M.P.P. for St. James, and a prominent Winnipeg barrister, is Vice-President; and the other officers are: Gordon A. MacLean, C.A., of Winnipeg, Secretary, and John Anderson, Treasurer and Professional Manager. The directors in addition to the above include Andrew Lloyd and Carl Fink, of Winnipeg, W. H. Galbraith, of Hartney, Manitoba, William Dempsey, of Killarney, Man., and Everett Evans, of New York, N.Y.

Children Cry For "Castoria"

Especially Prepared for Infants and Children of All Ages

Mother! Fletcher's Castoria has been in use for over 30 years to relieve babies and children of Constipation, Flatulency, Wind Colic and Diarrhoea; allaying Feverishness arising therefrom, and, by regulating the Stomach and Bowels, aids the assimilation of Food; giving natural sleep without opiates.

The genuine bears signature of

Chas. H. Fletcher.

Canada Exports Autos

British Empire Is Best Market For Export Cars

A growth in the automobile export trade from Canada, that is regarded as amazing is indicated in trade figures of the industry list made public for the ten months ended with August of the year.

Canada in point of fact, now leads any other British country in its export of cars. This is attributed in large measure to the location here of branch factories of United States concerns which they avail themselves of preferential tariffs to which Canada is party. The total exportation in twelve months ended with August was 61,545, while in twelve months ended in June the United States exported 101,000 cars. The Canadian output was fifty per cent. over August of last year.

The total export in the month was 5,615, compared with 2,849 in August last, of this number 563 cars and parts valued at $324,081 went to the States, 2,161 valued at $744,000 to Australia, 924 valued at $362,254 to New Zealand and 890 to South Africa.

The British Empire is the best market for Canadian cars and the United States for auto parts.

Very Kind of Her

Lady.—You can get work beating carpets two doors from here—they're cleaning house.

Tramp.—Thanks, madam. I might of bumped right into it if you hadn't tipped me off.

The world's larger boiler turns 120,000 pounds of water into steam each hour.

The Aim of Life

The great thing is to tackle life in a spirit of adventure. The main object is not to win; it is to live. Winning or losing is an issue beyond human control. Effort is not. Nothing is easier than to identify the life in which effort and aspiration of some sort are present. They light it up as the sun a landscape. Bread-winning is only the body of life. The soul of life begins in whatsoever, plus quantity of voluntary effort, is added over and above the sheer necessity of bread-winning.—Boston Globe.

Externally or Internally, it is Good.—When applied externally by brisk rubbing, Dr. Thomas' Eclectric Oil opens the pores and penetrates the tissue, touching the seat of the trouble and immediately affording relief. Administered internally, it will still the irritation in the throat which induces coughing and will relieve affections of the bronchial tubes and respiratory organs. Try it and be convinced.

Our Ancestors

Every human being on the face of the globe is compelled by the demands of Nature to have two parents, four grand-parents, eight great-grandparents, 16 ancestors in the fourth generation back, 32 in the fifth, almost 1,050,000 in the twentieth, and nearly 1,073,000,000 in the thirtieth. The whole number of one's ancestors in the fiftieth generation is 5,362,794,914,214,046—a multitude which no man can number.

For World Peace

Progress toward world peace is made by gradually adjusting the causes of international discord, by edging in here and there, by cultivating the habit of national reasonableness and good will. It is not made by any magic such as a league covenant which falls to pieces at the first strain.—Kansas City Star.

Don't waste time reasoning with an angry man.

New Branch Lines

Projected Construction of Lines In Lethbridge and Cardston Districts

President Beatty, of the Canadian Pacific Railway, at a Board of Trade function in his honor held at Lethbridge, made the definite announcement that the projected Kipp-Little Bow branch would be constructed in 1924. This branch will traverse the centre of the Lethbridge Northern Irrigation district, into whose ditches the water is being turned, following the completion of repairs to the flood damage of last June.

Mr. Beatty also promised a Cardston delegation consideration of a portion of a line east and west through that town to serve the extreme south-western corner of the province.

The estimated weight of the earth is 6,000,000,000,000,000,000 tons.
